Tories challenge Kinnock record

British ministers mounted a concerted attack at the beginning of the Conservative Party conference on the record of Labour Party leader Neil Kinnock in an attempt to prevent any revival in his party after its recent conference.

Conservative strategists recognise that Kinnock's two successful speeches attacking the Labour Party's hard-left have boosted him and his party's standing.

Conservative chairman Norman Tebbit accused Kinnock of saying nothing during the year-long miners' strike and of having to follow the lead of the big union bosses.

Page 8

Lesotho shelled

Radio Maseru in independent Lesotho said an armed South African-trained terrorist had been arrested and that a Maseru suburb had been shelled from South Africa.

Brussels blast

The extremist Fighting Communist Cells guerrilla group said it planted a car bomb that wrecked gas company offices in Brussels.

Greenpeace warned

French navy formally warned the anti-nuclear protest ship Greenpeace to stay outside a 12-mile territorial zone around France's nuclear test site in the South Pacific.

Tunis killing

A Tunisian security officer fired on a group of people on the country's southeastern island of Jersba and killed one person. The officer was overpowered by colleagues.

Warship protest

Norwegian police tightened security around a visiting U.S. warship in Oslo after demonstrators protested that the ship may be carrying nuclear weapons.

Soviet oil find

The Soviet Union has discovered 20 new fields of oil and gas off its coast in the Barents Sea, opening up an oil-producing region close to the Arctic Circle.

Page 2

Kidnapper jailed

Munich High Court jailed for four years the leader of a group who kidnapped the grandson of the late newspaper magnate Axel Springer.

Nicaragua protest

Nicaragua has made a new protest to Costa Rica about further attacks on its border posts by U.S.-backed guerrillas.

Unexpected delivery

A 20ft rubber wheel-chock fell from a Belgian Boeing 737 and crashed through the roof of London's Covent Garden fruit and vegetable market. No-one was hurt.

Puerto Rico alert

Puerto Rico declared a state of emergency after at least 84 people were killed in widespread floods caused by three days of heavy rains.

Jet crash salvage

A Canadian coastguard vessel sailed from Cork in the first stage of an international operation to lift from the ocean floor pieces of wreckage from an Air India jumbo jet that crashed off Ireland last June.

New drug sniffer

Heathrow Airport, London, is testing a machine said to be able to detect the smell of drugs through several layers of plastic.

Seat of culture

The Liechtenstein capital of Vaduz will hold a referendum this month to end a three-year old row over installing a public toilet in an arts centre.

Hanson raises bid for SCM

HANSON TRUST, the UK industrial holding company again lifted its offer price for SCM, the New York conglomerate in an attempt to win the seven-week takeover battle.

THE ITALIAN luxury cruise ship Achille Lauro, hijacked by Palestinian terrorists near Alexandria, Egypt, appears to be sailing westwards after anchoring about 10 miles from the Syrian port of Tartous, writes Our Foreign Staff. Unconfirmed reports said that one US passenger, possibly two, had been killed.

As the ship moved away in the direction of Cyprus, another vessel carrying representatives of the mainstream Palestine Liberation Organisation (PLO) - whose chairman is Mr Yasser Arafat - was heading north from Egypt in an apparent attempt to mediate. The PLO said yesterday from its Tunis headquarters that it was not involved in the hijacking - which began on Monday night.

Portuguese PSD refuses to accept Soares resignation

BY DIANA SMITH IN LISBON
PORTUGAL'S Social Democratic Party (PSD), which won a small majority of 2.7 per cent of the vote in Sunday's general election, has refused to accept the resignation of Sr Mario Soares, leader of the Socialist coalition.

The PSD claims that Sr Soares - who wished to hand over to the SDP Deputy Prime Minister - cannot legally take this step and therefore General Antonio Ramalho Eanes, President of the Republic, will have to settle the dispute.

The Democratic Renewal Party (PRD) - which will hold the balance of power in the Portuguese parliament after attracting 1m voters to its drive for cleaner politics - has lost no time laying down the guarantees it will exact from the Government to be formed by Sr António Carvalho's PSD.

The PRD rallied around the austere figure of Gen Eanes and his wife, Manuela, who campaigned energetically for her husband's party on an anti-corruption, anti-jobs-for-the-boys platform.

The PRD's startling rise in Sunday's election must hurt Sr Soares' Socialists, and ensured that the Social Democrats will have to pay heed to PRD stipulations if their Government is not to topple before it gets going.

Intensifying the moralistic tone of its campaign, the PRD is demanding that the new Government guarantees that it will "loyally co-operate" with the President and refrain from the guerrilla tactics waged against him in the past by some parties.

It is also demanding guarantees that individuals will be chosen for public office or to run public enterprises solely on the grounds of their competence, ending "scandalous situations" in this domain.

Coalition leader Sr Mario Soares: resignation refused

It is also seeking guarantees that inquiries into corruption, tax fraud and social security debts will be unblocked and made public and it wants guarantees of "honesty, independence and pluralism" in the state-owned media, particularly television.

The PRD also demands guarantees of economic development policies that ensure fairer distribution of income; an end to penalisation of the poor; and guaranteed respect for the constitution.

There is a warning note in the demand for respect for the constitution. All established parties to the right of the Communists have been clamouring for constitutional reform that would eliminate the Socialist content which has blocked economic liberalisation and would make it difficult for Portugal to adapt firmly to EEC membership.

Without hammering the point in the election campaign, the PRD has made clear it does not want constitutional change. This may cause severe clashes in the future.

Unesco calls on U.S. and Britain to stay in agency

THE UNESCO general conference opened yesterday with an appeal to the United States and Britain to stay in the fold of the troubled agency to ensure its survival. Reuter reports from Sophia.

Opening the 23rd general conference of Unesco's 160 member states, the outgoing conference chairman, Mr Said Tell of Jordan, said the U.S. departure threatened the existence of the agency and went against the interests of world co-operation.

"I call upon President Ronald Reagan and the U.S. government to reconsider its withdrawal and come back to the organisation as soon as possible," he told 3,000 delegates and staff in the huge Bulgarian Cultural Palace.

The walkout by Washington, which left the agency reeling under a 25 per cent budget shortfall, was causing more than a mere financial crisis, Mr Tell said. It was also depriving the Organisation of the work of one of the world's biggest intellectual and scientific communities.

David Brown reports on an industry which, despite being efficient and market-sensitive, may soon be forced into closure

Swedish shipbuilding on the rocks

"I AM FURIOUS . . ." said Mr Olof Palme, Swedish Prime Minister, surveying the remaining gantry cranes of what was once the world's second largest shipbuilding port.

But Mr Palme could hardly have felt the same rage as a group of over 1,000 shipyard workers listening silently in the pelting rain as he delivered his real message: "There cannot be further support from the Government."

They have seen shipyard employment tumble from some 33,000 10 years ago to about 11,000 today, with the prospect of more cuts in the immediate future.

Sweden's merchant shipbuilding industry is still arguably among the world's most efficient. Even so, its last remaining shipbuilder (Kockums) its once dynamic offshore yard (Götaverken Arendal), and the Clevver repair and rebuild yard, all part of the state-owned Svedberg group may be unable to survive in their present form beyond

next year.

The situation in Sweden offers a sober lesson to other European yards, and to Government decision makers across the continent. No maritime nation has reduced so much capacity so quickly. Yet faced with the necessity of turning a profit on a strictly commercial basis or going under, the shipyards are fighting an impossible battle.

"We have efficient yards with a good cost structure," says Mr Olof Westin, head of the shipbuilding section of Sweden's Ministry of Industry, "but it is very problematic."

In 1980, the Government planned a major retrenchment plan, coupled with a package of "restructuring" assistance.

Capacity, already well below a decade earlier, went further. Sweden's share of the world market has tumbled from over 10 to below 1 per cent.

Early this year, the Government took the politically difficult decision to phase out the Uddevalla yard, the last tanker

and bulk carrier producer, at a cost of 2,400 jobs.

Several years ago, Götaverken Arendal ceased standard ship production, specialising in the then-burgeoning offshore sector, while Kockums focused on building ro-ro, cruise and container vessels. But as one owner put it, "we know where there's a market anyway."

Since its creation in 1977, Svedberg has lost the astonishing total of SKr 10.3bn (£912m) on combined sales of SKr 51.4bn. The Government has already poured in some SKr 20bn in restructuring aid - not to mention about SKr 25bn in building credit guarantees.

Under its 1980 plan, Svedberg was to have been profitable by the end of this year. But the deadline was later extended by 12 months to the end of 1986, and additional money was needed. Yet the target still seems as elusive as ever.

An important part of the story is the persistent problem of a declining overall market and

world overcapacity, coupled with protectionist subsidies.

Kockums recently lost a crucial SKr 1.5bn cruise ship order to Chantiers Atlantique of France, whose bid was bolstered by a Government subsidy estimated to have been as high as 50 per cent.

"We can compete on production costs in any yard in Europe," says Mr Erik Palsson, executive vice-president of Kockums in Malmö, "but we can't compete with the state of France."

Two gleaming new 133,000 cubic metre liquefied natural gas (LNG) carriers berthed in Malmö - the second was delivered last year but neither has been to sea - tell another part of the Swedish story. The story is one of speculation and short-term forecasting. Ships were built for stocks to maintain employment against an expected market which never materialised.

Easy credit terms were extended to build vessels for shipowners who later couldn't pay the bill. This lesson was made painfully clear by Consafe, the world's largest owner of accommodation platforms which went bankrupt early this month with long-term debts of some SKr 3bn.

It was largely orders from Consafe that allowed the transformation of Götaverken Arendal into a leading offshore yard, and led to hopes of a grand new future for Swedish shipbuilding. But when Consafe gave up, it faced an acute liquidity crisis caused by trying to service the debt largely owed to Arendal, and over half its fleet was laid up.

Of the total 145 ships launched by Svedberg since 1977, between 60 and 70 have been repurchased and either re-sold or transferred into Zenith, a state-owned shipping company created to take the vessels off Svedberg's hands.

The value of most of them

according to the Industry Ministry, is no more than scrap. Hit by a declining freight market, and a huge drop in the value of secondhand ships, Zenith has lost a total of the 3.3bn since 1977. It was bailed out by the Government in 1982 - allowing the Svedberg group to post its first profit of SKr 312m the following year.

Since 1977 Svedberg has been forced to write down the value of its vessels by SKr 2.8bn. Zenith has written off a further SKr 1.35bn, and the Government has had to pump in a total SKr 4bn to help the company cover its losses.

Moreover, with further write-offs looming in the wake of the Uddevalla closure, the Government last month quietly rammed a proposal through the National Debt Office which sets the stage for the transfer of a further 25 ships booked at a value of SKr 3.5bn to Zenith.

None of these measures has been adequate however to cope with persistent global overcapacity and continued protectionism.

Götaverken Arendal has hit by the entry of new com-

petitors in the offshore sector, now contemplating new cruise ships, Ro-Ro vessels or ferries, and too many yards chasing these orders.

Svedberg executives, now working on a new restructuring plan, still speak of a "fighting chance" for these yards but are forced to admit the future is problematic. As Mr Palsson of Kockums says: "We have been living with the rope around our necks for a long time."

But the perception here is that the noose is tightening. For Swedish shipbuilding, or what is left of it, time is running out.

The early stages of the trial have been marked by protests of defence lawyers at the seating arrangements that they say force them to turn their backs on their clients while the prosecution faces them. Lawyers for the family defendants have also claimed that constitutional guarantees of equal treatment are being violated.

The FP-25 is held responsible for the killing of several businessmen, bank raids and a number of explosions since its appearance in mid-1980.

Trial resumes in Portugal

By Diana Smith in Lisbon
THE TRIAL of the charismatic Lt Col Otelo Saraiva de Carvalho, one of the architects of the coup that overthrew Portugal's right-wing dictatorship in 1974, resumed this week. He and 43 others are accused of belonging to the FP-25 terrorist group.

The early stages of the trial have been marked by protests of defence lawyers at the seating arrangements that they say force them to turn their backs on their clients while the prosecution faces them. Lawyers for the family defendants have also claimed that constitutional guarantees of equal treatment are being violated.

The FP-25 is held responsible for the killing of several business people, bank raids and a number of explosions since its appearance in mid-1980.

EEC INTER-GOVERNMENTAL CONFERENCE BECOMES BOGGED DOWN

Little agreement on how to reach decisions

BY QUENTIN PEEL IN BRUSSELS

THE inter-governmental conference of EEC member states, launched at the Milan summit in June to speed up the process of European integration and streamline decision-making, is rapidly becoming bogged down to within two months of reaching a conclusion.

Only the European Commission has so far submitted a significant range of proposed amendments to the Treaty of Rome - the founding charter of the Community - one week before the stipulated deadline. West Germany has also submitted plans to give more influence to the European Parliament.

Even those proposals have left the participants deeply divided, both on the content and on the overall strategy of how to change the Treaty without creating new areas of potential confusion and delay.

The Commission last weekend nevertheless decided to maintain its present approach of seeking to add broad-ranging new articles to the Treaty, which would greatly extend the areas open to majority decision-making, and simply override existing provisions of the existing Treaty.

In amendments submitted yesterday to the top level group of officials working on the conference, the Commission merely sought to define more closely which subjects should be decided by majority voting, and where to leave some loopholes in the original Treaty.

Three key areas have so far surfaced in the debate as the most divisive:

No provision is made for the maintenance of the so-called Luxembourg compromise, which allows an effective national veto on majority decisions, and which has yet to be fully considered by the conference.

Both Denmark and Greece,

committed to pumping money into outlying areas like Greece, Portugal and Ireland, in return for those countries agreeing to open up their markets.

Mr Jacques Delors, the Commission president, last week criticised both Britain and West Germany at a closed meeting of the European Parliament's Socialist group, accusing them of wanting a European "super-market" without accepting the converse of more aid to the poorest regions.

stop short of the "co-decision making" sought by the Parliament itself. But they do propose giving the Parliament a bigger role in consultation with the Council of Ministers.

The key would be the establishment of a "co-decision committee" with equal numbers from the Council and Parliament to seek common ground on areas of issues. A very few decisions would require joint approval, such as enlargement of the Community, and association treaties with third countries.

The Commission itself is unhappy with such plans, which would curb its own powers, and yesterday submitted different proposals.

Denmark, in particular, is opposed to any extension of the Parliament's powers, but Britain also likely to oppose any move which looks like making decision-making even more cumbersome than present.

The northern states, on the other hand, accuse Greece in particular of refusing to implement the original demands of the Rome Treaty - let alone any new steps unless more cash is forthcoming for "convergence."

Potentially the most divisive area of all is how to extend the powers and influence of the European Parliament.

The West German proposals

practicality of such sweeping amendments, preferring to see a much more detailed breakdown of the areas in which majority voting should or should not apply.

The second broad area of debate, which could affect the whole future balance of the EEC, concerns the question of convergence, or the extent to which member states should be

practising such sweeping changes.

The northern states, on the other hand, accuse Greece in particular of refusing to implement the original demands of the Rome Treaty - let alone any new steps unless more cash is forthcoming for "convergence."

Potentially the most divisive area of all is how to extend the powers and influence of the European Parliament.

The West German proposals

Soviet oil strikes on Barents Sea coast

By Patrick Cockburn in Moscow

THE SOVIET UNION has discovered more than 20 new oil and gas fields onshore on the coast of the Barents Sea, the Soviet news agency Tass said yesterday.

The oil is loaded directly on to tankers because "laying pipes in such high latitudes proves to be costly and time-consuming," Tass says. The sea lanes along the north coast of the Soviet Union can be used by oil tankers all year round, although in winter ships must be preceded by an ice-breaker.

The decline in output from the old oilfields in the Volga-Urals, and the drop in output in West Siberia has led to the Soviet Union speeding up its oil exploration programme by 50 per cent in the next five-year plan (1986-90), with a 50 per cent increase in West Siberia.

Offshore drilling for oil, which comes under the Ministry of Gas, has been stepped up in the deeper parts of the Caspian Sea, the Baltic and since 1977 in a co-operative venture with a Japanese company off Sakhalin Island in the Far East. There has been little offshore exploration in the Barents Sea so far but the Soviet Union has bought three drill ships from Finland.

Exploration and development drilling in difficult and isolated parts of the Soviet Union such as the Barents Sea has been criticised in Moscow as a diversion of resources from the need to drill deeper in areas such as West Siberia.

Poles agree to export more to Moscow

By Christopher Bobinski in Warsaw

POLAND IS to repay after 1990 its roubles 5bn (£4.5bn) debts run up in trade with the Soviet Union between 1980 and 1983, it has been revealed here.

The announcement came as the two countries signed a trade agreement for the next five years which foresees a 50 per cent increase in turnover compared to the 1981-85 period.

Under the agreement, Polish exports, which mainly comprise manufactured goods, will have to rise much faster than imports which are expected to grow by 3 per cent a year. This results from the situation that imports must be balanced by 1988, with Poland repaying the deficit of next year at the year after with surpluses to be achieved in 1989 and 1990.

This year, exports are planned at Roubles 5.6bn, while imports are set at Roubles 6.4bn, and the effort to wipe out the deficit in trade by 1988 will put additional strain on a none too buoyant economy.

Soviet deliveries of vital raw materials like oil, iron ore and cotton will stay at present levels, forcing the Poles to look for growth either in greater efficiency or additional imports from hard-currency markets. Increased deliveries of Soviet natural gas are to be linked to Polish capital investment in Soviet gas extraction projects.

Over the next five years, Poland will be paying interest on its Soviet debt but official figures refuse to reveal the exact rate. There is to be a 45 per cent increase in 1988, prices in mutual turnover of consumer durable goods.

CRAXI GOVERNMENT OPTIONS LOOK BLEAK AFTER SEIZURE OF LINER

Italy's pro-PLO stance turns sour

BY JAMES BUXTON IN ROME

THE hijacking of the Achille Lauro confronts the Italian Government with what is probably its most difficult crisis since Red Brigades terrorists in 1978 kidnapped and murdered ex-Prime Minister Aldo Moro. If the crisis ends badly it could be both a diplomatic and political disaster for Sig Bettino Craxi, the Prime Minister.

The attack on the Italian liner comes despite the fact that Italy has followed a markedly pro-Arab policy in the Middle East for more than two decades. It consistently portrays itself in the Mediterranean as a bridge between Europe and the Arab world.

The search for a mediating role in the Arab-Israeli conflict has become a crucial element of the foreign policy pursued by Sig Craxi and his Foreign Minister, Sig Giulio Andreotti, since the Craxi Government came to power in August 1983.

Sig Craxi has taken Italy closer than ever before to the Palestine Liberation Organisation. Twice in the past few months he has met Mr Yassir Arafat, the PLO chairman, in

Sig Craxi castigated Israel three Israelis at Larnaca in Cyprus, for which the attack was initially blamed. The Italian Government also called for an official visit to Italy by Mr Abraham Sharir, the Israeli Minister of Tourism, in protest against Israel's action.

The Government's reaction to the Israeli raid provoked dissent in the five-party coalition, with Sig Giovanni Spadolini, now playing a crucial role in the hijacking crisis as Minister of Defence criticising Sig Craxi for taking too pro-Arab a line. The hijacking of the Achille

Francis Ghiles reports on the outrage which followed the Israeli raid

Tunis despairs of U.S. approach

"ALL IS NOT LOST" signed a U.S. diplomat in Tunis with more than a hint of relief in his voice on hearing the outcome of the vote in the UN Security Council last weekend. The UN voted to condemn the Israeli air raid on the headquarters of the Palestine Liberation Organisation in Tunis had not been vetoed by the U.S.

Tunisians were deeply insulted and humiliated by President Ronald Reagan's initial reaction to the raid, in which an estimated 70 people died, as a legitimate reprisal following the killing of three Israelis on a yacht in Cyprus. His failure to condemn the Israeli's violation of Tunisian sovereignty in order to attack Mr Yassir Arafat, the PLO leader, in his home has caused outrage.

To understand the depth of Tunisian feeling it is worth realising that President Habib Bourguiba has for 50 years of his political career put close relations and reliance on the U.S. at the top of his political agenda, going so far as to support U.S. policy in Vietnam up to the eve of the fall of Saigon. In 1982, the U.S. privately gave its blessing to the PLO headquarters being set up in Tunis following Mr Arafat's retreat from Beirut. At the weekend, Mr Arafat said: "President

Reagan was probably expecting by now to send a bouquet of red roses for me."

Mr Bourguiba has always been even-handed over his Middle East policy. In 1965 he was applauded by Palestinians in Jericho when he called for a dialogue with Israel but vilified by other Arab leaders.

The change in U.S. policy as shown by the Security Council vote is likely to have enhanced President Bourguiba's prestige with other Arab leaders this time.

The Tunisian leader has reaffirmed to Mr Arafat that his country will always honour its tradition which stretches back to the days when thousands of Moors and Jews fled the Christian reconquest of Spain in the late 15th century.

The President has always defended the rights of those Jews who live in Tunisia. During the World War II when he was a prisoner in France, he supported the then Tunisian ruler, Bey Moncef, in his refusal to bow to French pressure and deprive Tunisian Jews of their nationality.

In 1982, the U.S. privately gave its blessing to the PLO headquarters being set up in Tunis following Mr Arafat's retreat from Beirut. At the weekend, Mr Arafat said: "President

Tunisian leaders were all the more upset by the initial U.S. reaction to last week's raid because the U.S. had repeatedly reassured Tunisia that would guarantee its sovereignty over the past two months of crisis with neighbouring Libya. Many people last week questioned the value of that guarantee and wondered whether the U.S. Sixth Fleet in the Mediterranean did not warn them of the impending Israeli attack.

Newspapers in Tunis voiced strong anti-American feeling for the first time since the 1967, six-day war, reminding their readers of the fate of the Shah of Iran, America's friend.

The authorities have been successful in avoiding any serious outburst of anti-American feeling in the streets.

The Tunisian armed forces, whose purchase of a squadron of F-5 aircraft was opposed by some Airforce officers but pushed through by the President as a gesture of friendship towards the U.S. must also feel deeply insulted.

The thousands of messages of support that have poured in from all over the world have comforted many Tunisians; however, relations with other Arab countries, especially Algeria, the Vichy regime's home, have been reinforced although Tunisia is unlikely to

Tokyo insurers pay out on loss of JAL crash Jumbo

A JAPANESE insurance pool has paid ¥84bn (£27.6m) to Japan Air Lines to cover the loss of a Jumbo jet which crashed August 12 killing all but four of 524 people on board, insurance officials said yesterday. Agencies report from Tokyo's Narita Airport.

Referring to "improper repairs" carried out by Boeing on the ill-fated aircraft, a JAL official said that neither the cause of the accident nor the degree of liability by JAL or Boeing could be expected to be clarified in the near future. As a result, the two companies would co-operate in negotiating compensation in order to ensure the swiftest possible settlement of claims by the families and four survivors.

A statement released on behalf of Boeing in Tokyo said that the negotiations will be carried out by JAL officials on behalf of the two companies. JAL suffered 26.7 per cent drop in the number of passengers during September, with a 41.1 per cent fall on its Tokyo-Osaka route, compared to September 1984.

Ethiopia 'still needs aid'

BY QUENTIN PEEL IN BRUSSELS

ETHIOPIA still needs up to 1.2m tonnes of food aid in the coming year, in spite of the recent rains which have broken the three-year drought in the country's northern provinces.

Fall recovery of agricultural production from the drought will take another three years, according to Mr Mersie Ejigu, the Ethiopian Planning Minister. Even then desertification and erosion of the top-soil in the drought-affected areas could prove irreversible.

He said resettlement would actually greatly assist the recovery of agricultural production, by moving people away from land destroyed by centuries of cultivation and precarious weather conditions.

Suharto assures oil majors

BY KIERAN COOKE IN JAKARTA

PRESIDENT SUHARTO has assured foreign oil companies operating in Indonesia that his Government remained committed to encouraging foreign participation in oil exploration.

Speaking at the opening of celebrations marking 100 years of oil production in Indonesia, Mr Suharto said that as long as foreign companies understood the needs of his country's development programme, they

would be welcome.

Dr Subroto, Indonesia's Energy Minister and current chairman of the Organisation of Petroleum Exporting Countries, said that there were still vast areas to be explored in Indonesia, South-East Asia's biggest oil producer. "We continue to ensure you a stable political and economic environment conducive to profitable oil operations," he told more than 300 oil executives.

Hijackers 'could have danced with my wife'

By Tony Walker in Cairo

"FOR ALL I know they could have danced with my wife," said a Dutch tourist when asked if he had noticed a Palestinian presence on the cruise liner, the Achille Lauro between Italian ports and Alexandria.

Now Italy is involved in a crisis where it will need all the help it can get both from Israel and the Palestinians. But the options look bleak. Israel has made clear that it has no intention of yielding to terrorist threats.

Crisis management, difficult enough in any government is particularly hard to practise in a coalition administration.

Apart from the Prime Minister's office in Palermo, Chigi-time operations rooms were yesterday functioning in Rome at the Foreign Ministry, the Ministry of Defence and the Ministry of the Merchant Marine.

But yesterday morning Sig Rennato Altissimo, the Minister of Industry, insisted that his ministry be informed of every piece of information about the crisis and involved in every decision. This is better than nothing, technically owns the Achille Lauro since the Lauro line is in government appointed receivership following a financial crash in 1982.

Some passengers speculated

that the Palestinian gunmen may have boarded the ship in Naples, where security, they said, was lax.

More than 600 passengers disembarked in Alexandria to dine, sightsee and shopping in Cairo before rejoining the Achille Lauro in Port Said to continue their voyage to Israel, Cypriot and Greek ports before returning to Italy.

More than a dozen nationalities, including German, French, British, Austrian, Italian and American, are among those who spent an anxious day yesterday awaiting news in two Cairo hotels—the Ramses Hilton and the Concorde.

According to a Dutch woman passenger, she was told in Port Said late on Monday evening there was a "problem." "We did not see our ship at the quay. Then about midnight they told us Palestinians had taken control of our ship," she said.

Passengers said most of the 600 passengers who had stayed on board were elderly. They had not faced the 500 km round trip to travel between Alexandria, Cairo and Port Said.

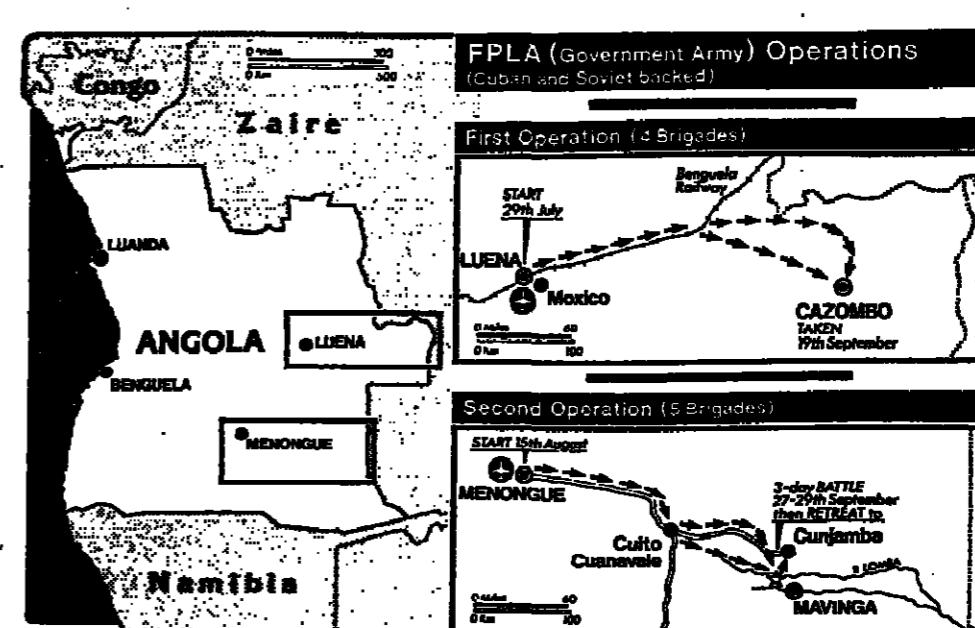

Fran Elvira Maria Buchweiser, 22, a West German, said she had six close friends still on board. "I am very worried about them," she said.

There are reportedly...no British passengers on board, nor six of the crew are British, according to Savimbi, and foreign and South African correspondents that "not a single Sou hAfrican soldier" had been involved and that the 17 aircraft shot down, including 5 MiG-25 helicopter gunships, had been hit by anti-aircraft, missile and other ground fire.

Dr Savimbi said the attacking force had lost approximately half their strength, with at least nine Soviets and 38 Cuban advisers killed, while Unita advisers were totally burnt out.

The turning point in the three-day battle came on September 23 when Unita forces were ordered to retreat across the Lompa River back to Cunjabia.

Soviet advisers, up to 15 per brigades according to intercept radio messages, were being airlifted out of the battle zone by MiG-21 and MiG-23 fighters. "But the Russians are

Unita routs Soviet and Cuban supported offensive in Angola

BY ANTHONY ROBINSON AT LOMBA RIVER, SOUTHERN ANGOLA

UNITA guerrilla forces led by Dr Jonas Savimbi last week routed a heavily armed Cuban and Soviet-backed offensive by the Angolan government Fapla army in a three-day battle

losses were 410 dead and 822 wounded. The wounded were being assisted by South African army medical teams as well as doctors from France and the Red Cross.

Correspondents round the battlefield were able to verify the scale of material losses put by Dr Savimbi at 78 vehicles destroyed and 50 captured. The lumbering convoys of Soviet and East German-built heavy-duty trucks, rocket launchers, armoured personnel carriers, tankers and troop transports came under heavy and accurate machine gun, rocket and mortar fire from mobile Unita forces, many on foot.

The offensive, launched on August 15 from Cuito Cuanavale, was aimed at capturing the town of Mavinga, a long-time Unita stronghold, whose strategic importance at the confluence of east-west transit routes is enhanced by its 3 km long dirt runway and its position as outer-defence point for Dr Savimbi's permanent base at Jambala some 230 km further south.

Strong denial

Reports from Luanda that the offensive was halted after attacks from South African aircraft, backed up by South African troops on the ground, were strongly denied by Dr Savimbi. At a press conference, he underground dugout at Mavinga, Dr Savimbi told foreign and South African correspondents that "not a single Sou hAfrican soldier" had been involved and that the 17 aircraft shot down, including 5 MiG-25 helicopter gunships, had been hit by anti-aircraft, missile and other ground fire.

Dr Savimbi said the attacking force had lost approximately half their strength, with at least nine Soviets and 38 Cuban advisers killed, while Unita advisers were totally burnt out.

The turning point in the three-day battle came on September 23 when Unita forces were ordered to retreat across the Lompa River back to Cunjabia. Soviet advisers, up to 15 per brigades according to intercept radio messages, were being airlifted out of the battle zone by MiG-21 and MiG-23 fighters. "But the Russians are

bogged down in the sandy, rutted tracks and with only limited cover from bush shrub and small trees, dozens of burnt-out trucks littered the ground and many rotting corpses still lay where they had fallen. Some of the trucks were mounted on ammunition cases and appeared to have been under repair when attacked. Others, such as a fully loaded Stalin's Organ rocket launcher and an ammunition truck exploded with such violence that debris was spread over a wide area while acres of scrub were totally burnt out."

The turning point in the three-day battle came on September 23 when Unita forces were ordered to retreat across the Lompa River back to Cunjabia.

Soviet advisers, up to 15 per brigades according to intercept radio messages, were being airlifted out of the battle zone by MiG-21 and MiG-23 fighters. "But the Russians are

silence those within the MPLA government arguing for a negotiated settlement with Unita but also was part of broader Soviet objectives. These were to test the West's will to resist in the run-up to the Reagan-Gorbachev summit and discourage the U.S. from taking advantage of the recent repeal of the Clarke Amendment which hitherto has prevented U.S. assistance to Unita.

IMF ANNUAL MEETING

IMF chief backs greater debt role for World Bank

BY PETER MONTAGNON IN SEOUL

MR JACQUES DE LAROSIERE, managing director of the International Monetary Fund, has strongly endorsed a greater role for the World Bank in dealing with the developing countries' debt crisis.

In what is being interpreted here as a significant shift of emphasis in IMF policy, Mr De Larosiere also stressed the need for renewed growth in debtor countries in his opening speech yesterday.

"Today, with the necessity in so many countries for major structural adjustments and sectoral reforms, the role of the World Bank has never been more important."

"Clearly the only workable approach to alleviating the debt service burden is one in which output and exports of indebted countries grow rapidly. In short, the debtor countries must grow out of debt," he said.

Throughout the section of his speech dealing with developing countries, Mr De Larosiere was at pains to take a conciliatory approach in an apparent effort to defuse the mood of acrimony between the IMF and some of its clients.

He made it plain that there should be no let up in the economic adjustment effort by debtor countries.

"In many countries budget deficits are still too high and continue to crowd private investment. Too often, when it comes to making choices, capital outlays are sacrificed in favour of less productive current expenditures. At the same time, the improvements in current account positions, spurred by external constraints, have in many cases involved severe import compression, a weakening of domestic economic activity, and increased unemployment."

Thus, while external positions have sometimes improved dramatically, underlying weaknesses and imbalances remain to be addressed if a liberal trade policy.

De Larosiere: policy shift

economic growth is to be restored and social tension reduced."

Mr De Larosiere said there was no escape from the need to curb inflation through measures such as exchange rate and fiscal adjustment, but IMF policies "are not anti-growth as is sometimes contended," he said.

When inflation accelerated to exorbitant rates, severe disruption in the domestic economy could only be avoided by a reduction in the rate of monetary growth and deep cuts in the budget deficit.

But as a transitional measure, a wage-price freeze, which the market-oriented IMF traditionally abhors, "can be effective."

Here I want to pay special tribute to the courage and determination of the Argentine authorities in launching a bold and far-reaching economic reform," he said in an accolade that would scarcely have been thinkable a year ago.

Among other ingredients of a growth-oriented adjustment policy were the promotion of domestic savings through "attractive" interest rates and reinforcing of market-oriented policies for growth.

"Third, increased lending by the private banks in support of

BY ANY STANDARDS it has been a difficult week for Mr A. W. (Tom) Clausen, President of the World Bank. Arriving in Seoul for the Bank's annual meeting, Mr Clausen found himself the centre of fevered speculation in the corridors of the Hilton Hotel and in the financial columns of the world's Press.

Mr James Baker, the U.S. Treasury Secretary, was scheduled to announce that the World Bank would move to centre stage, alongside the International Monetary Fund in a new official effort to resolve the international debt crisis.

The question that resulted

from this was whether or not Washington, which by convention appoints the president of the bank, would ask Mr Clausen to serve another five years after his term expires next June.

With dignity and good humour, Mr Clausen parried reporters' questions and suffered the criticism of his stewardship of the bank which has been common currency both internally and externally over the past year.

Mr Clausen's period at the bank could hardly have been more difficult. Some of those who supported his appointment hoped that, as a Republican, he

would find it easy to deal with the newly installed Reagan Administration in 1981. Instead, both he and the bank encountered hostility. The Administration had little sympathy for international institutions and certainly not for multilateral development banks.

By late 1982, the debt crisis had struck and before long questions were being asked about why the World Bank was not playing a bigger role in helping to resolve it. One reason was that the U.S. administration had indicated its opposition to such a move.

Mr Clausen and his colleagues nevertheless set about trying to exploit what little room for manoeuvre they had. They tried to step up the bank's quick disbursing loans and to compensate for the scaling back of major investment projects financed by the bank which accompanied the Third World's plunge into recession.

At the same time, they successfully built up the financial strength of the bank, an important accomplishment at a time when its borrowers were under a cloud.

The bank was desperately anxious to retain its Triple A credit rating in the international bond and money markets in which it raises the money to lend to developing countries.

Mr Clausen also tried to create a more orderly management structure within the bank itself.

Mr Clausen's resignation yesterday signals the start of the search for a new president, who will be able to represent the institution more effectively in public. The candidate will need more finely-tuned political antennae and a more forceful personality if the bank is to expand its role effectively.

The new president will, it seems, inherit the problem of only lukewarm support from the bank's major shareholder. Nevertheless, Mr Clausen's successor will still face a daunting task.

Clausen: stepping down after first term

Daunting task lies ahead for Clausen's successor

BY STEWART FLEMING IN WASHINGTON

Baker's Third World debt plan

BY PETER MONTAGNON

MR JAMES BAKER, the U.S. Treasury Secretary, yesterday called for a new growth-oriented strategy for dealing with Third World debt problems and said commercial bankers should increase their lending to debtor nations by \$20bn over the next three years.

His remarks were made at the opening of the International Monetary Fund-World Bank annual meeting in Seoul. The following are extracts of his speech:

"If the debt problem is to be solved, there must be a 'Programme for Sustained Growth,' incorporating three elements:

"First and foremost, the adoption by principal debtor countries of comprehensive macro-economic and structural policies supported by the international financial institutions, to promote growth and balance of payments adjustment, and to reduce inflation.

"Second, a continued central role for the IMF, in conjunction with increased and more effective structural adjustment lending by the multi-lateral development banks (MDBs), both in support of the debtors of market-oriented policies for growth.

"Third, increased lending by the private banks in support of

comprehensive economic adjustment programmes.

"I want to emphasise that the U.S. does not support a departure from the case-by-case debt strategy we adopted three years ago. This approach has served us well; we should continue to follow it.

"Emphasising growth does not mean de-emphasising the IMF. Through both its policy advice and balance of payments financing, the Fund has played a critical role in encouraging needed policy changes and catalysing capital flows. It must continue to do so. But it must also develop new techniques for catalysing financing in support of further progress.

"Enhanced surveillance, for example, can sometimes provide an effective means of continued IMF involvement.

"The Fund should give higher priority to tax reform,

Herr Stoltenberg said. But he said his fully backed the programme proposed in the U.S. plan on the need for developing countries to pursue lasting growth.

Herr Stoltenberg said Bonn will not put pressure on German banks to step up their lending to developing nations.

"The international banking community has played an important role during the past three years. I am however concerned about the decline in net bank lending to debtor nations over the past year and a half,

"All of us can appreciate the commercial banks' concerns, but we believe these concerns would dissipate if the banks were confident that new lending is in support of policies for growth in the developing nations.

"Our assessment of the commitment required by the banks to the entire group of heavily indebted, middle income developing countries would be net new lending in the range of \$20bn for the next three years. In addition, it would be necessary that countries now receiving adequate financing from banks on voluntary basis continue to do so, provided they maintain sound policies.

"I would like to see the banking community make a pledge to provide these amounts of new lending and advise if publicly, were to make similar growth-oriented policy commitments as their part of the co-operative effort. Such financing could be used to meet both short-term financing and longer-term investment needs in the developing countries.

THERE are no clear signs that the economies of Japan and Europe are moving to offset the effects on world demand of the slackening growth rate in the U.S., the chairman of the 1985 joint annual meeting of the International Monetary Fund (IMF) and World Bank said yesterday.

Addressing the opening session of the four-day meeting, Mr Mamoudou Touré, Senegal's Minister of Economy and Finance, warned that under these circumstances "there is every reason to fear that authorities in industrial countries will be unable to resist the strong pressures" from vulnerable sectors of their industries for protection against foreign competition.

"Clearly, the developing countries will not be able to expand their exports, re-establish their creditworthiness and diversify their output if they have to cope with protectionist policies of the industrial countries. As a result, the present position of those whose genuine development problems have yet to be addressed and whose resource needs are enormous.

Under current circumstances, Mr Touré stated, many of the poorer developing countries in which will be unable to service their debts even after rescheduling without foregoing the kind of investment required to ensure an appropriate development of their economies and living standards.

• A reorganisation in trade in developing country commodity-based upon fair compensation for the world goes into agricultural production;

• An opening up of industrial countries' markets;

• An improvement in the international monetary system, guaranteeing relative stability in exchange rates and interest rates at reasonable and sustainable levels.

Mr Touré noted that in absolute terms, the external debts of Latin America are on a quite different scale to those of African countries, especially those in sub-Saharan Africa.

He made clear that a uniform treatment of the debt problems of IMF and World Bank member countries will only reinforce the precarious financial position of those whose genuine development problems have yet to be addressed and whose

resource needs are enormous.

Under current circumstances, Mr Touré stated, many of the poorer developing countries in which will be unable to service their debts even after rescheduling without foregoing the kind of investment required to ensure an appropriate development of their economies and living standards.

Turning to the world debt problems, Mr Touré said a viable solution could not be separated from:

of the island used by light aircraft ferrying marijuana to the U.S. The army has taken over security responsibilities at airports used for internal flights.

However, the security forces have admitted problems in policing the many coves and inlets around the island which are being used by boats taking marijuana to the U.S.

Jamaican attitudes to eradicating marijuana tend towards the apathetic. For over a century marijuana has been cultivated for personal use, which continues to be widespread, not only among the Rastafarian sect which considers the drug a part of religious ritual, but also among a growing number of teenagers.

Curbing cultivation and smuggling also poses a serious economic problem for villages whose economies have been built on the marijuana trade. The People's Nations' party, in opposition to Mr Seaga, has raised the question of compensation for marijuana farmers who are being told to turn to more legitimate but less lucrative crops.

Government officials have also argued that the U.S. should do more to control buyers and distributors in the U.S.

The reduction of marijuana farming has come through a combination of measures by the island's Government. Mr Edward Seaga, Prime Minister and Finance Minister, last year saw to it that 28 of the island's alleged marijuana traffickers were seized by the internal security forces seized 450,585 pounds.

The U.S. drug enforcement agency had earlier estimated that Jamaica, second to Colombia as a foreign source of marijuana, was providing about 1,900 tons annually, and valued at over \$1.4bn. The agency estimated that only about 13 per cent of this went back into the cargo.

This success against Marijuana cultivation is likely to please the U.S. which has been pressuring Jamaica to act against growers and smugglers.

It was as a result of this pressure that Mr Peter Charles, Jamaican's Utilities and Transport Minister, recently announced 164 security guards and ramp attendants at the Kingston Airport had been sacked. Flights of the state owned Air Jamaica have been landing in the U.S. with shipments of marijuana as part of the cargo.

We have been advised by the U.S. Government that if marijuana or any other drugs are to be part of our cargo, we are going to ask our permit to go into or out of the U.S." Mr Charles explained.

Aircraft belonging to the carrier have been seized twice this year in the U.S. and the airline is facing fines of \$13m (£9.7m) levied by U.S. customs.

The Government says it deserves cut until there was evidence of greater Jamaican willingness to fight marijuana farmers and smugglers.

While moving to reduce any threat to aid from Washington, the Jamaican Government has been unhappy with aspects of the U.S. approach to the problem. U.S. suggestions that Jamaica uses the chemical paraquat to destroy marijuana farms have been rejected.

Mr Oswald Harding, the junior Foreign Affairs Minister, said there was no known antidote to paraquat. Widespread intercropping on Jamaican farms could lead to legitimate crops being affected. He added that marijuana smokers could be affected if they used the drug treated with paraquat.

"We feel that concentrating on interdicting drug shipments is the most efficient use of our limited manpower and equipment," he said.

Government officials have also argued that the U.S. should do more to control buyers and distributors in the U.S.

Canute James reports on efforts to reduce marijuana cultivation

Jamaica nips drug trade in the bud

Seaga: strong measures

THESE are hard times for Jamaica's once thriving marijuana farmers. The island is fast losing its position as the second largest source of marijuana smuggled to the U.S.

According to the Jamaican government, this year's crop has been all but destroyed. "Our efforts in the anti-drug programme have been so effective that there will be virtually no summer crop this year," the Government's information service said.

This success against Marijuana cultivation is likely to please the U.S. which has been pressuring Jamaica to act against growers and smugglers.

THE MANAGEMENT PAGE

EDITED BY CHRISTOPHER LORENZ

NYE EVANS says that his company's business doubled in a year thanks to ExSec. Malcolm Hackman admits that without ExSec he might have been forced to close his works completely.

Since this elixir of business life visited both companies at the modest cost of only £15 per day travelling expenses, ExSec looks very good value indeed.

ExSec — Executive Secondment — was set up two years ago to offer big business expertise to small companies in Wales. Under the scheme specialist managers from large organisations work in small companies on a part-time basis to help solve specifically identified problems.

ExSec devised by the CBI Wales Region and the Welsh Development Agency, is supported by a wide range of organisations including BSC (Industry) — the steel corporation's job-creation company, PA Management Consultants and the Development Board for Rural Wales. Shell, BP, Kellogg's, Allied Steel and Wire and ICI are among employers which have already supported the initiative by seconding managers. Small companies are made aware of the service through a number of promotional efforts, including leaflets sent out by the WDA.

Behind the scheme is the belief among the sponsoring organisations that the development of many small companies is hampered by lack of management expertise in particular specialist skills.

ExSec attempts to bridge this gap. It will typically second a manager to a small company for two or three days a week for up to six months. In total a manager's secondment is supposed to last for two years, though not all companies have allowed this.

It is not, however, a rescue operation for troubled businesses. ExSec executives satisfy themselves that companies are financially viable and have the potential for further development. The seconded manager goes in to carry out a specific, jointly-agreed assignment, not to take over the general running of the business.

Metpro, a Bridgend company which produces ingot casting, scrap shredding and other equipment, was one of the first businesses to benefit from the creation of ExSec in 1983.

Nye Evans, its chairman, admits to having a low general regard for industry-assistance schemes backed by public agencies. But his company also had a problem — how to increase the penetration of its specialist products in overseas markets. The cost of developing an adequate network of agents in new markets was beyond the resources of the company, in

Consultancy

Trouble-shooting on a part-time basis

Alan Pike reports on a secondment scheme in Wales

terms of both finance and management time.

Under the ExSec scheme Singh Goldsmith, a Shell marketing executive, joined Metpro to help work out a new overseas marketing strategy. Goldsmith brought previous experience and contacts — in South America and East Asia.

Thanks to his efforts, Metpro has enlarged its factory space by 50 per cent and increased its staff from 24 to 36. Turnover has doubled over the past year. Metpro's UK market share has remained constant with the growth coming from increased export orders for which the company thanks Hugh Goldsmith.

"He set up agencies and gave us contacts we could never have developed ourselves," says Evans. "So far as I am concerned, the Government could take away all their grants and loans and concentrate on this sort of scheme to develop particular businesses."

A short distance away near Porth in the Rhondda, Malcolm Hackman and his brother David were struggling with their 34-year-old family printing busi-

ness when they sought help from ExSec. Orders were coming in and they were working as hard as they knew how, but this was not reflected in their financial results.

"We had approached consultants in the past who came up with plans and recommendations, but then went away and left us to implement them," says Malcolm. "We had a terrible feeling of isolation, knowing something was not right with the business but not really being sure what it was."

"When ExSec sent Ken Charles to work with us, we went along to meetings with the bank and for the first time felt that there was someone on our side arguing from our point of view."

Charles, an accountant seconded by Control Data, helped the Hackman brothers reorganise their accounting procedures to give them a clearer idea of the profitability of particular jobs.

He introduced them to the unusual notion of turning orders down if they were going to lose money on them. Keeping the

presses turning at any price was not a guaranteed route to profitability. Some of this work, including a long-standing contract with which the brothers had been undertaking at unprofitable rates — has returned on more rewarding terms.

"Our problem was not lack of business but trying to cope with the business we had," says Malcolm. "We might not have survived without ExSec. Now we have confidence in what we are doing."

These are substantial testimonial to a scheme which has so far operated with almost no funds. Managers continue to receive their salaries from the companies seconding them. Small companies using the service make a notional contribution to travelling expenses. Other costs, like marketing ExSec and providing its offices are met by the Welsh Development Agency.

The scheme is available to companies with between 10 and 150 employees — nine out of ten Welsh businesses employ fewer than 50 people. So far ExSec

has become involved with 38 businesses.

About half of these have wanted the assistance of financial and accounting specialists. The next most sought-after skill — covering about 25 per cent of companies — has been marketing, while the remainder have had production, administration or personnel problems.

Derek Morgan, Midlands regional director of PA Management Consultants who has been closely involved with ExSec from its inception, stresses the two-pronged value of the scheme. "It is heartening to see companies which are being helped to develop. But the scheme also develops the outlook of the seconded managers. It makes them more valuable to their parent companies when they return."

"There is no shortage of small companies awaiting assistance so long as we can find enough suitable secondees to provide it."

The founding purpose of ExSec was to help small companies stabilise and grow, thus improving the employment base and economic prospects of Wales. But the impact upon the seconded managers of working within the scheme has proved an important by-product.

With the first batch of two year secondments now coming to an end, the scheme's organisers are currently trying to persuade more big employers to release staff for the next two years.

This is not an easy task. The objective of assisting small companies can be met only by seconding managers who combine the right mix of specialist and personality skills. And the market for secondees from industry is becoming, with the growth of enterprise agencies and education-industry link schemes, an increasingly difficult one.

So the development of schemes like ExSec depends upon large companies being prepared to regard the use of secondment not just as a service to the community, but as a positive career development tool for their managers.

There are indications that ExSec is having a dynamic effect on staff seconded from large companies. At least one manager has returned to a more senior role with his parent company, aided by experience gained on the scheme. And Ken Charles, after two years of helping people like the Hackman brothers tackle their problems, has decided to give up "safe, secure, pensionable employment" and continue working among small companies in Wales as a consultant.

A personal view

Abbreviation rules OK

BY MARTIN DICKSON

AN insidious disease is eating away at the traditional face of British industry. No, I am not referring to the debilitating effects of North Sea oil, the uncertainties of exchange rate movements or the divisive nature of the educational system. This particular ailment is the product of an unhealthy obsession with the letters of the alphabet.

But when a change of identity is necessary, why the obsession with letters? There are at least three reasons for dislikes of the letters of the alphabet.

First, it makes life very confusing. Can you be sure of correctly distinguishing SGR, the construction company, from ESG, the motor component manufacturer, or DRG, the paper and packaging group? Or what about two competing sales promotion companies on the Unlisted Market: KLF and FKR. (A third, Counter Products Marketing, is usually known as CPM.)

The sector most prone to the disease is high tech electronics, which boasts names such as CAP, CPS Computer, and CPU Computer.

Second, there are cultural and aesthetic objections. Letters cut off a company from its historical roots, and they usually lack the euphony of a proper name. Put more simply, letters are just plain boring. The name Ransome Hoffman Pollard has a proud ring to it, and is suggestive of the company's history as a great manufacturer of bearings. RHP Group has about as much romantic appeal as

Pretty Polly tights, to be known still as Birmingham Tyre and Rubber. At a more humble level, Wolverhampton Steam Laundry no longer describes that company's business adequately.

But when a change of identity is necessary, why the obsession with letters? There are at least three reasons for dislikes of the letters of the alphabet.

First, it makes life very confusing. Can you be sure of correctly distinguishing SGR, the construction company, from ESG, the motor component manufacturer, or DRG, the paper and packaging group? Or what about two competing sales promotion companies on the Unlisted Market: KLF and FKR. (A third, Counter Products Marketing, is usually known as CPM.)

The sector most prone to

the disease is high tech electronics, which boasts names such as CAP, CPS Computer, and CPU Computer.

But the picture is not entirely black. For example, three years ago the Lead Industries Group, concerned about its image, no longer reflected its name, switched letters when choosing a new title. Instead, it chose the word Cookson — a constituent part of the group dating back to the 18th century, and one which reflected the recent broadening of its interests.

Would that more companies

would follow this example.

The same suspicions apply to those two words so often twinned with an abbreviated name: "Group" and "International." Most companies of any significance these days, so why does the XYZ Group have to be of the XYZ Group? Similarly, if the likes of Unilever and British Petroleum do not need the need to trumpet the transitional scope of their operations, does not XYZ International look rather too

pushed up in so doing?

But the picture is not entirely black. For example, three years ago the Lead Industries Group, concerned about its image, no longer reflected its name, switched letters when choosing a new title. Instead, it chose the word Cookson — a constituent part of the group dating back to the 18th century, and one which reflected the recent broadening of its interests.

LOOK MORE BEAUTIFUL EVERY DAY WITH OIL OF CASTROL

When presented with a product from Castrol your first impulse might not be to put it on your face.

But the chances are that at some time in your life you have done just that. If you wear cosmetics it could have been as recently as this morning.

Castrol Whitemor white oils are refined to the ultimate in purity and blended to individual customer requirements. They are medicinal grade oils meeting the demands of British and European Pharmacopoeia and the United States FDA regulations.

In fact they are so pure that they can be taken internally in such forms as Liquid Paraffin BP.

In cosmetics they are essential ingredients. Take lipstick, for example. It needs a lubricant to keep it rolling. Many leading suntan oils and baby lotions contain high proportions of white oil.

Whitemor acts in many beauty products as a holding agent or carrier for other ingredients such as colours and fragrances. Vanishing creams and hair creams are emulsified white oil. The list goes on.

Castrol includes among its customers for white oils some of the most illustrious names in the world of beauty and fashion.

No wonder we're on everyone's lips these days.

Tebbit launches Tory attack on Kinnock

BY PETER RIDDELL, POLITICAL EDITOR

SENIOR MINISTERS speaking on the opening day of the Conservative Party conference yesterday mounted a concerted attack on the record of Mr Neil Kinnock, the leader of the Opposition, in an attempt to prevent any Labour Party revival after its conference in Bournemouth last week.

Conservative strategists recognise that Mr Kinnock's two successful speeches attacking the hard-left have boosted him and his party's standing. They want to challenge this now.

Mr Norman Tebbit, the Conservative Party chairman, accused Mr Kinnock of saying nothing during the year-long miners' strike and of having to follow the lead of the big union bosses.

"We won't believe anything has really changed until you expel those extremists who carried the votes against you in your own party conference," he said. "It was a good speech, but unless Neil Kinnock can add action to rhetoric, it will soon be seen as no more than words, words, words."

Similarly, in a later speech, Mr Peter Walker, the Energy Secretary, in rare unanimity with his rival Mr Tebbit, accused Mr Kinnock of "cowardice" during the strike in the face of Mr Arthur Scargill, the president of the National Union of Mineworkers.

Mr Walker said: "One thing Mr Scargill can be certain of is that, as

speeches during the day, to the delight of the rank and file Tories.

Mr Tebbit received standing ovations at the beginning and end of his speech of a kind never given before to previous party chairmen, partly because of his ordeal in the IRA Brighton bombing last year.

Mr Tebbit, who unusually faltered twice during his speech, con-

tinued, in her closing address on Friday, Conservative leaders believe that the Government's current problems with voters are mainly because of uncertainty about the Government's sense of direction and objectives. Mrs Thatcher will aim to answer these doubts.

The party leadership's efforts to produce an unruffled conference

The Conservative Party at Blackpool

long as Neil Kinnock remains leader of the Labour Party, no matter what extreme policies Mr Scargill pursues, no matter how he continues to deprive miners of their ballot, no matter how he links up with the Soviet Union and other communist trade unions, Mr Kinnock would never have the guts to have Arthur Scargill removed from the Labour Party."

These attacks on Labour, coupled with attempts to highlight divisions within the SDP/Liberal Alliance, were sustained in other ministerial

concentrated on attacking the Opposition and devoted less than a fifth of his speech to the Government's record.

He acknowledged that to win the next election the Tories must have a vision of what sort of society they intended to create. This must involve restoring national unity, respect for traditional institutions and, above all, achieving a property-owning democracy which could transform attitudes in industry.

This theme will be taken up by Mrs Margaret Thatcher, the Prime Minister, in her closing address on Friday.

may be upset by the votes yesterday by representatives to hold debates on race relations and trade unionism.

The result of a second ballot to choose the exact motions will be announced today. There could be some embarrassment since there are some hard-line motions calling for a ban on further immigration and for further legislation on trade union law.

Yesterday's debates were mainly low key with the only mildly critical speeches about some of the pro-

Mr Norman Tebbit: received standing ovation

posed changes in social security, notably in housing benefits. Apart from that for Mr Tebbit, the warmest ovations were given to Mr Walker and Mr Norman Fowler, the Social Services Secretary.

worker had been prevented from talking to his shop steward when the incident occurred.

The Ellesmere Port walkout followed union claims that Vauxhall is breaking a national agreement on car imports - made when the unions relaxed opposition to imports of the Spanish-built Nova model - by importing Astra before utilising Ellesmere Port's production capacity to the full.

The unions say the Merseyside plant is still operating at a rate of 10 Astras per hour below capacity. They say that 30,000 Astras have been imported from West Germany in the past 14 months.

At Luton, the dispute, which the company says has so far cost lost production of the Cavalier model worth more than £2m, started when the production worker was dismissed for refusing to move to another job in the trim shop on the assembly line.

About 30 other workers walked out in protest at the dismissal. When other production workers refused to fill their positions on the line, the management sent home all workers on both shifts. Yesterday, workers clocked on for the day shift as normal, but were sent home again an hour later.

A local official of the Transport and General Workers' Union said the company had offered to reinstate the dismissed worker, but had refused to discuss the matter further. According to the union, the

immediate suspension was designed to ensure that the AUEW did not recommend acceptance of the government cash in its new ballot.

At the Labour Party conference last week the union's executive disclosed that it would not use the word "recommend" on the new ballot paper, in an attempt to stay within the spirit of compromise.

However, the union intends to make it clear that the majority on the executive is in favour of accepting the money.

The ballot paper will set out the case both for acceptance and rejection of the money - both drafted by the AUEW. The meeting between Mr Willis and AUEW executive members will take place against this backdrop.

The AUEW's declared stance on the ballot form - while avoiding forthright recommendation - makes it more likely that members will vote in favour of accepting the cash.

Mr Gavin Laird, AUEW general secretary, said yesterday that the union would repeat its offer for the TUC to have space in the union's journal to set out the case for rejection. So far, this has not been taken up.

The first AUEW ballot on the government cash resulted in a 12 to one vote in favour of acceptance. If the fresh ballot leads to a repeated "yes" vote, the union faces suspension from the TUC.

Production halted in disputes at two Vauxhall car plants

BY OUR LABOUR STAFF

SEPARATE WALKOUTS halted car production yesterday at Vauxhall's car plants at Luton, Bedfordshire, and Ellesmere Port, Merseyside.

At the Luton plant, more than 4,000 workers on the day and night shifts were sent home for the second day running in a dispute over the dismissal of a production worker last week.

At Ellesmere Port, more than 3,000 workers staged a half-day strike to protest at Vauxhall's policy of importing the Astra model. They mounted a 200-vehicle motor cavalcade through the town centre.

The Luton dispute, which the company says has so far cost lost production of the Cavalier model worth more than £2m, started when the production worker was dismissed for refusing to move to another job in the trim shop on the assembly line.

About 30 other workers walked out in protest at the dismissal. When other production workers refused to fill their positions on the line, the management sent home all workers on both shifts. Yesterday, workers clocked on for the day shift as normal, but were sent home again an hour later.

A local official of the Transport and General Workers' Union said the company had offered to reinstate the dismissed worker, but had refused to discuss the matter further. According to the union, the

Riots influence dispute over urban aid cuts

BY ROBIN PAULEY

THE RECENT inner-city riots have complicated a dispute between Mr Kenneth Baker, Environment Secretary, and Mr Nigel Lawson, the Chancellor of the Exchequer, over how deeply to cut the Government's urban programme.

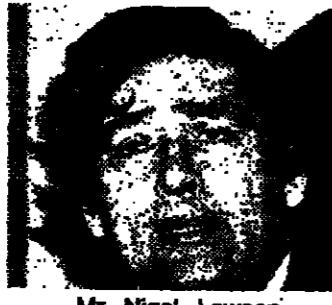

The urban programme is the Government's pool of cash allocated to local authorities which have the worst areas of inner-city decay and decline to fund specific social or economic projects of renewal or improvement.

Mr Lawson wants to stick to the plans in the public expenditure White Paper (policy document) which imply a further real terms cut in urban aid of 9.9 per cent in 1985-86 and a further 1 per cent in 1986-87.

Mr Baker has close on £1bn of extra expenditure bids to put to the "Star Chamber" — the special committee of Cabinet ministers which is deciding on the claims of the spending departments for expenditure above the limits which the Treasury wants to impose.

Mr Baker, whose claim includes an extra £50m for housing, had wanted to maintain the urban programme in cash terms at £338m for each of the next two years, representing a real cut of 4 per cent and 3½ per cent.

Since then, there have been inner-city riots in London, Liverpool and Birmingham. The problem now facing Mr Baker, who is due to speak about local government finance this morning at the Conservative Party conference, is whether he might have to retreat and ask for even more money so that urban aid is again seen to be rising in real terms, rather than being cut back still further.

Mr Nigel Lawson

After the riots of 1981, Mr Michael Heseltine then Environment Secretary, persuaded the Cabinet to increase the fund substantially.

It rose from £215m in 1981-82 to £270m in 1982-83 and £245m in 1983-84. These were rises of 17.5 per cent and 21.5 per cent respectively in real terms.

Urban aid then suffered a real cut of 7.5 per cent to £238m in 1984-85 and a further real cut of 4.3 per cent in 1985-86 by being held at the same cash figure.

• Mrs Cynthia Jarrett, the black woman whose death in Tottenham, north London, died of heart disease, an inquest was told yesterday.

Miss Jarrett, aged 29, collapsed and died during a police search of her home.

Mr Bernard Carnell, the family's solicitor, said he had instructed a pathologist to carry out a second post mortem examination. He said the family would co-operate with the inquiry being conducted by a senior policeman into the circumstances of the death.

Merrill connects up with SEAQ

BY BARRY RILEY

MERRILL LYNCH, the U.S. securities group, takes an important step this morning towards becoming part of the London Stock Exchange when it starts contributing quotes to the stock exchange's overseas prices service SEAQ International.

It will be quoting bid and offer prices for 75 overseas stocks on the Australian, Japanese, Hong Kong and South African pages of SEAQ International, which is available on the 3,500 terminals of the stock exchange's Topic electronic information service.

With the inclusion of Merrill — trading as Merrill Lynch Europe — the number of contributors to SEAQ International rises to 18.

Barclays to invest in new data network

BY ALAN CANE

BARCLAYS Bank, the UK's largest, is to spend £25m over the next five years on a new nationwide data communications network. Mr Peter Roberts, assistant general manager in charge of the Bank's telecommunications, said Barclays would install network to deal with a volume of data traffic which it expected to be 30-times the capacity of the existing system.

The backbone of the network will be a series of data communications switches manufactured by the Canadian telecommunications company Northern Telecom.

Barclays' data processing will continue to be carried out on IBM mainframe computers. Data will be passed from the IBM machines to the Northern Telecom SL10 switches where it will be transformed (packet-switched) into a format suitable for transmission over British Telecom high-speed data links.

The value of the contract splits roughly three ways between Northern Telecom, IBM and British Te

lecom. Mr Roberts said the network would comprise entirely leased lines and would combine British Telecom high-speed services such as Megastream and Kilotest.

The system will use V25, the internationally accepted standard for packet-switched data, the most advanced form of high speed data transmission used today.

All the major clearing banks are boosting or replacing their national data networks as they come to terms with the increased traffic volumes which will be created by Saturday opening, the use of automated teller machines (banks-in-the-wall) and robot cashiers.

Last year, National Westminster announced a multi-million investment in an integrated system for voice and data, without which, it said, Saturday opening would be difficult. Barclays believes in the integration of voice and data, but its Northern Telecom will, in the first instance, transmit data only.

U.S. SALARIES HELP TO FUEL CITY'S WAGE EXPLOSION

BY JOHN LLOYD, INDUSTRIAL EDITOR

THE STEEP spiral of earnings among stockbrokers, investment analysts and money traders in the City of London is set to continue unabated, in spite of the problems such salaries are now throwing up.

Part of the cause of the insatiable rise of "super pay" is the effect of salaries paid by U.S. banks in their home base are now spilling into their London subsidiaries.

The journal of Income Data Services' Top Pay Unit says that UK merchant and investment houses... still lag considerably behind U.S. levels, however. Quoting the journal *Euromoney*, IDS says: "While U.S. financial institutions continue to expand and arrive in London to build up their equity trading top earnings can only go one way — up."

IDS says that the other reasons for rapid salary rises are common to my market taking off rapidly. It says that merchant and banks and stockbrokers have typically operated with a few hundred staff among which pay has been high but informally set in a "comfortable and fairly stable market."

Now, however, "the arrival of U.S. banks and investment houses... has changed all that. Most U.S. financial institutions have long had developed compensation practices, have already coped with deregulation on Wall Street some years ago, and have never been afraid to go out and pay for the people they want. Gentlemanly behaviour had nothing to do with it — financial results are everything."

The importation of this culture

has meant the development of teams of key people who "quite suddenly acquired the opportunity for exceptional six-figure earnings."

IDS says that salaries start relatively high, with graduates entering stockbroking houses receiving £7,500-£9,500 this year as assistant analysts. After two years, salaries run at £14,000 to £15,000 for analysts, then up through the ranks to top analysts at around £25,000.

However, it is only once brokers and analysts become partners that the super earnings begin; a really high earner would receive £100,000 as base salary, with a total earning package in a good year, assuming a share in the earnings, would be over £1m.

"The secrecy surrounding stockbroking partnership earn-

ings has traditionally shielded most of the world from these high figures. They have only become more widely known after the mergers and takeovers and the poaching of last year."

In international banks, however, salaries are much lower. The London Banks' Personnel Management Group gives average earnings for data processing managers at £25,500; for company secretaries £22,370; for lawyers £24,000 and for heads of personnel at £23,641.

Fringe benefits can, of course, increase the total package considerably. IDS says that long-term disability schemes, company cars, subsidised lunches and health insurance are now standard offers, while most pension schemes give two thirds of salary after 40 years.

'Super pay' era set to continue

BY JASON CRISP

APRICOT Computers yesterday launched a powerful business microcomputer which the company believes will boost its fortunes, which have been flagging recently.

The machine is expected to account for about 40 per cent of turnover next year.

The computer, the Apricot XEN, also marks a redirection in the company's strategy. It has largely turned its back on low-cost business micros for which margins are very tight.

The XEN is the most expensive model yet produced by Apricot and

is to rival the leading personal computers sold by IBM. Although it is at the top of its own range, the XEN is substantially cheaper than the equivalent model from IBM.

Mr Roger Foster, chief executive of Apricot said: "This is easily the most exciting product we will produce in the last two years. It will be a death blow to the IBM clones."

Last month Apricot — formerly Applied Computer Techniques — warned that it would make a loss in the first half of the year after stock write-downs and lower trading profits. After running into problems in

France and West Germany, Apricot — one of Britain's fastest growing companies — downgraded its expectations for sales for the full year from £140m to £120m.

The XEN will go on sale at the end of October and is expected to make a significant contribution to turnover in the last five months of the financial year.

Mr Foster said the XEN would account for 25 per cent of sales by volume and 40 per cent by value in the next financial year.

The product also represents a small but significant move towards

compatibility with IBM, which dominates the personal computer business. The XEN will run some IBM software, and it is the first Apricot computer to offer as an option a 5in. disc drive which is the same size as that for the IBM PC.

The new computer costs between £2,500 and £3,000 and is being sold as a rival to the IBM XT, its mid-range personal computer. However, the Apricot XEN uses the same microprocessor as IBM's top personal computer, the AT, and the British company claims its machine is significantly faster.

FOCUS ON SOUTH AFRICAN COMMERCE AND INDUSTRY

Pick 'n Pay — long running growth and progressive stance on social issues

Raymond Ackerman, chairman and founder of Pick 'n Pay Stores, talks to Richard Rolfe, London-based international editor of Finance Week of Johannesburg.

Mr Raymond Ackerman

have actually 18 000 souls in our business and there are many other businesses in this country doing the same, not just a few where people are promoted on merit.

We have share schemes open to all our staff — management, buyers, accountants, to such an extent that 56% of our Western Cape management is totally made up of coloured or Indian and black men and women so we have achieved that. We went to government on the question of housing and said that since blacks are considered to be temporary residents within South Africa, how can we develop black managers, which you are allowing us to do, unless they can own houses within South Africa? We got the government to change the laws for a 99 year lease and recently to change it to full home ownership within South Africa just like any white can enjoy.

That was the second major thing that we have achieved and the third is through the Urban Foundation, an organisation of 200 business who put their money into the foundation to improve the quality of life of this country and to lobby with government for major changes. I would say that the foundation has been instrumental in some of the major changes that have occurred recently. So what could we do in the future? Certainly, continue with this very strong pressure group through the Urban Foundation and independently, individually, push for what I believe is crucial — citizenship for all people of this country. This is the cardinal thing that upsets the black community in this category, despite the other problems that they are not citizens in their own land.

We fought government on housing and on non-discrimination and we fought on other areas such as business rights for all races in city centres, which is now being promulgated to all races can open businesses. The masters we must continue with are citizenship rights, standing up clearly on issues such as movement of people when they don't want to move and arrests without trial. These are the fundamental issues facing our country, not necessarily business concerns, but they affect us all because without a peaceful society we can't grow or trade or feel that we want to keep our children in this country, which is what I sincerely want to do. So there is an enormous amount that we can do and will do in all these ways.

Role: You have personally been active in opposing disinvestment. What have you done and why?

Ackerman: I am against disinvestment for the obvious reason that it will cause massive unemployment, or massive loss of confidence which I think is as important as the loss of jobs. So the answer to why I am against it is that I think that all people will suffer, black and white — and I believe in an evolutionary change in this country, not revolutionary change. My prime reason is that those propagating disinvestment, although they may not know it, are propagating revolution because that is the only thing this is going to bring, in my opinion.

What I am doing is trying to run my own business on the lines that I mentioned earlier, on non-discriminatory lines, by standing up on issues and fighting for a fairer society. I am also trying to lobby very strongly with government in the areas that I have mentioned and work with groups like Urban Foundation and others for vital change. The third point is to speak to overseas groups who come here, and when I travel on business, to Australia, England, America, Europe, to talk to business and parliamentary groups, press and TV on the changing scene in this country. Not as an apologist for apartheid but as a fighter against it, to show that the business community is left of government, which it is, and that the business community is not in the pocket of government, which many people believe.

We are fighting for change and deserve the support of the world in continuing these changes if we want an evolutionary, fairer society. We must show the world that the path of disinvestment, frankly, is the path of the revolutionary approach and if people want that, well, then they must go ahead on disinvestment. But if they want an evolutionary change and if they would only sit back and analyse their own consciences in America and Holland and France and England and ask, "Do we want bloody revolution or evolutionary change?" I think the answer would be along the evolutionary approach and that's why I argue continually for it.

First trials begin on raising efficiency of power station coal

BY DAVID FISHLOCK, SCIENCE EDITOR

A £20m research programme into the cleaner and more efficient combustion of coal for power generation has just begun its first test runs at the National Coal Board's (NCB) Grimethorpe Colliery in Yorkshire.

One aim is to see whether pressurised fluid-bed combustion of coal is a cheaper alternative to fine-gas desulphurisation. The programme is funded by the U.S. electric supply industry and managed jointly by the NCB and the Central Electricity Generating Board (CEGB).

The research is being funded and managed jointly by the NCB and the Central Electricity Generating Board (CEGB). The partners are also negotiating with the U.S. for substantial research contracts which could add several million pounds more to the programme over the next 18 months.

Another technical objective is to explore other means for cleaning up the hot gas released from the fluidised bed, in addition to the cyclones now used to remove dust. The Electric Power Research Institute in California, a research co-operative funded by the U.S. electric supply industry, has agreed to finance the addition of at least one new idea for hot gas clean-up. The investment proposed represents a big amplification of the engineering assessment of hot gas clean-up for fluidised bed combustion, Dr Chester said.

The third major technical objective is to demonstrate that PFBC is really a more efficient way of capturing sulphur than present technology. Sulphur is captured by adding crushed calcium carbonate to the fluidised bed.

The first trick is to choose a limestone that calcines to produce a porous particle, Dr Chester says. The next is to prevent calcium sulphate from plugging the pores before all the calcium has reacted with sulphur. The third trick is to use a lime stone that calcines to produce a porous particle, Dr Chester says. The next is to prevent calcium sulphate from plugging the pores before all the calcium has reacted with sulphur.

We have share schemes open to all our staff — management, buyers, accountants, to such an extent that 56% of our Western Cape management is totally made up of coloured or Indian and black men and women so we have achieved that. We went to government on the question of housing and said that since blacks are considered to be temporary residents within South Africa, how can we develop black managers, which you are allowing us to do, unless they can own houses within South Africa? We got the government to change the laws for a 99 year lease and recently to change it to full home ownership within South Africa just like any white can enjoy.

That was the second major thing that we have achieved and the third is through the Urban Foundation, an organisation of 200 business who put their money into the foundation to improve the quality of life of this country and to lobby with government for major changes. I would say that the foundation has been instrumental in some of the major changes that have occurred recently. So what could we do in the future? Interim Dividend	2.33p	2.07p

Interim dividend is payable on 19th December 1985 to shareholders at the close of business on 21st November 1985.

Pre-tax profits were 15.3% higher than for the corresponding period of 1984, and sales were at a record level being 22.8% above last year. I remain confident that the Group will achieve record profits this year.

Ray Parsons, Executive Chairman

U.S. confidence in its relationship with the UK

But while Mr Thompson—who hails from New Orleans—lights his habitual king-sized cigar in celebration of the UK Government's awards to his company, Mr Frederic Hamilton, the founder and chairman of Hamilton Oil Corporation, has less cause for satisfaction.

Hamilton Oil, which will eternally bask in the glory of being the first company to produce oil commercially in the North Sea, has had a terrible ninth round.

Despite applying for "tens of blocks," all Hamilton has is a 35 per cent stake in block 98/24, which lies unpromisingly in the middle of the English Channel.

This is an area where a number of companies, particularly French ones, have drilled for many years without a hint of success. Nevertheless, Mr Hamilton points out that his company would not have applied for the block if it was of no interest.

He does not disguise his irritation at the way his company has been treated. "We can't understand it after the way we have performed in the UK. No one of our size has spent as much in the North Sea. We are puzzled and it's a matter of great concern to us. We are now talking with the Department of Energy to find out the reason.

We want to find out why we didn't get better treatment, after meeting all our obligations in the North Sea. Some

companies which have contributed little have got a number of blocks."

Last year, Hamilton spent about \$200m in bringing the Esmond complex of gasfields into production. As the smallest North Sea gasfield yet to be developed, it required the sort of innovative thinking that enabled Hamilton to bring North Sea oil before giants such as British Petroleum and Shell.

Texas Eastern is no gung-ho North Sea operator in the Hamilton mould. Measured either in acreage or proven reserves, Texas Eastern has the largest North Sea interests of all the non-operating companies. This suggests the degree of caution befitting a company that has as its bedrock the conservative and regulated business of gas transmission.

Mr Thompson says that Texas Eastern is considering whether, after over 20 years in the North Sea, it should become more than a highly successful equity participant. But he adds: "We are not a macho operator. We don't have thousands of people to keep busy."

But underneath the cautious image, Texas Eastern, buoyed by its ninth round success, is preparing a big increase in its UK exploration. The annual exploration budget is to run at about \$50m, quite apart from the \$100m a year it had been spending as part of its share of the cost of bringing such fields as Hutton and Beryl B into production. In 1982-83 the company drilled only about four genuine exploration wells in the North Sea, but in the 1984-85 period the figure is likely to jump to 30.

With the stock market value of UK oil companies falling at the same time, it is now probably cheaper to buy North Sea interest through corporate take-over rather than "clean" acreage acquisitions, Mr Thompson points out.

This opens up the tantalising prospect of Texas Eastern muscling in on other UK corporate owners, which has recently witnessed a spate of similarly motivated takeovers, such as the successful £122m bid for Saxon by Enterprise Oil.

Mr Thompson concedes that Texas Eastern did consider bidding for Saxon itself, and that it has also been approached by another UK independent oil company which would be happy to be taken over.

But Texas Eastern seems unlikely to get involved in the UK oil company takeover trail. Such bids are almost invariably contested, and turn into an auction, with the eventual winner paying a full price for the assets. "If more people are involved than you and the guy you're talking to, then the thing is probably not worth buying. That's my principle," says Mr Thompson.

Financial Times Wednesday October 9 1985

APPOINTMENTS

Shake-up at Lloyds's broker

The shareholders of HARGREAVES REISS AND QUINN, Lloyd's brokers, have voted the view that the poor performance of the company has been below expectations, and have decided to strengthen the base of the broking operations. Accordingly, the following have been appointed to the board: Mr R. J. S. Ford, as chief executive; Mr H. G. Roberts, director of Telecommunications, and has responsibility for new business ventures within the group. Mr D. G. A. D'A. Lansden, as director and company secretary, formerly with BAT. Mr F. C. Fulford (a member of Lloyd's and a managing director of Reiss) has been appointed as director representing the minority shareholders, who are predominantly working members of Lloyd's. Mr J. W. Dibble, as director for financial affairs. Mr R. H. Hazlegrave and Mr J. C. Spears have resigned.

The problem is that the tax breaks which have so attracted Texas Eastern are equally attractive to other North Sea players. Mr Thompson points out that, despite the uncertainties that have afflicted the oil price, the cost of buying acreage in the North Sea has virtually doubled in the past two years. "Before 1983 you would have to pay maybe 50 per cent of the cost of well to take a 25 per cent stake in a block. Now you may have to pay 100 per cent of the first well, in order to earn that 25 per cent stake."

With the stock market value of UK oil companies falling at the same time, it is now probably cheaper to buy North Sea interest through corporate take-over rather than "clean" acreage acquisitions, Mr Thompson points out.

This opens up the tantalising prospect of Texas Eastern muscling in on other UK corporate owners, which has recently witnessed a spate of similarly motivated takeovers, such as the successful £122m bid for Saxon by Enterprise Oil.

Mr Thompson concedes that Texas Eastern did consider bidding for Saxon itself, and that it has also been approached by another UK independent oil company which would be happy to be taken over.

But Texas Eastern seems unlikely to get involved in the UK oil company takeover trail. Such bids are almost invariably contested, and turn into an auction, with the eventual winner paying a full price for the assets. "If more people are involved than you and the guy you're talking to, then the thing is probably not worth buying. That's my principle," says Mr Thompson.

Mr David Graham QC joins the firm from the bar, where he is a leading authority on insolvency. As a director of the firm's Cork Gully arm he will advise on changes in insolvency law and practice. Mr Mike Powell becomes director in charge of strategic studies in the information technology division.

Mr John Glitus has been appointed financial director of WYKO GROUP. He was formerly chief financial executive of UKO International.

Mr David Hutt, managing director of HERMAN MILLER, UK subsidiary of Herman Miller Inc. of the U.S., has been appointed vice-president, European operations, and a corporate officer of the parent company.

The U.S. quest for North Sea oil exploration licences

Why they're cock-a-hoop at Texas Eastern...

By Dominic Lawson

Hamilton Oil's Frederic Hamilton (above) and Texas Eastern's Archie Thompson

The world of Alfa Laval

THE INFINITELY SMALL.

JANE PARK

Our journey into the world of the infinitely small has just begun. Recombinant DNA technology is opening up a microuniverse with unimaginable possibilities.

Man has used biotechnology for thousands of years, without really understanding how it worked. Microorganisms have been fermenting wine, brewing beer, making cheese and leavening bread.

Alfa-Laval has 100 years of experience in traditional biotechnology. We developed the first separator for yeast production. Through the years our equipment has handled microorganisms in yeast factories, breweries, distilleries, penicillin plants and many other biotech applications.

Few companies are better prepared for the biotechnological revolution than Alfa-Laval. Once the genetic engineering is complete, the valuable end-product has to be produced on an industrial scale. This is a process that requires fermentation and cell disruption equipment, separators, filters and sterilization equipment.

Alfa-Laval is the natural choice for biologists throughout the world, helping to bridge the gap from the laboratory to commercial production. Biotechnology is an important part of the exciting world of Alfa-Laval. For more information about the rest of Alfa-Laval's world, send for a copy of our Annual Report. Write to: Alfa-Laval AB, Box 12150, S-102 24 Stockholm, Sweden.

ALFA-LAVAL

The world of Alfa-Laval — in thirty seconds.

Alfa-Laval is a world-leading engineering company supplier to the food industry, a world-leading supplier of centrifugal separators and compact heat exchangers, and a dominating supplier to world animal husbandry. The company has a strong position in emerging high technology businesses such as biotechnology and membrane technology.

Alfa-Laval employs 16,000 people in 35 countries and its annual turnover in 1983 was US \$1,200 million. Sales outside Sweden accounted for 90 percent of this turnover.

Today, Alfa-Laval's products and processes are solving problems in 130 countries and in more than 170 industries.

UK NEWS

Funds agreed to rescue Parrot venture

BY ROBIN REEVES, WELSH CORRESPONDENT

A RESCUE package to provide the recently launched Parrot Corporation with additional capital and financial assistance has been agreed by all its original institutional shareholders, Mr John Butterwick, Parrot's chairman, announced yesterday. The amount has not been disclosed.

The additional capital had been coupled with new banking and leasing facilities to put Parrot, Mr Butterwick said, "in a strong position to complete its full productive capacity and to fulfil its potential as one of the leading European manufacturers of floppy discs."

News that Parrot - described at the time it was launched early last year as one of Europe's largest venture capital start-ups - was in need of additional capital first emerged last month. There were reports that the company's plant at Cwmbran, South Wales, had been visited by fraud squad officers but, to date, no charges have been preferred.

The largest single shareholder in

Parrot is the Welsh Development Agency. It subscribed £1m in ordinary and preference shares to acquire a 22 per cent stake when the company early last year launched its £1m project to build Britain's first fully integrated floppy disc manufacturing facility.

The other leading institutional shareholders in the company are CIN, Commercial Union and Legal and General, each of which originally subscribed some £750,000.

Mr Butterwick and the WDA both refused to disclose the dimensions of the increased financial commitment to the company. However, the agency revealed that Mr David Waterstone, the WDA's chief executive, is to become the WDA's nominated director on Parrot's board.

Mr Butterwick confirmed that the remainder of Parrot's board was in the process of being reconstructed on the management and non-executive sides. This should be completed by the end of the month, he said.

expected to continue into the first decade of the next century.

Conoco is reported to be receiving 22.1 per cent, although neither the vendor nor purchaser will confirm this.

Statfjord, the most prolific oilfield in the North Sea, lies mostly in Norwegian waters but straddles the median line between the UK and Norwegian sectors, extending into UK blocks 21/12 and 21/12S.

It contains substantial quantities of associated gas which, apart from that used to fuel the production platforms, has been reinjected into the reservoir since the field went on stream in 1979.

Conoco (UK), an affiliate of the

gas from the field were signed on Monday by British Gas and the field's UK licensees, Conoco, British and Chevron/Gulf. Deliveries are

expected to begin later this year.

After processing and extraction of natural gas liquids from the wet gas some 500 cubic ft a day are sold to British Gas for sale in the UK. The remaining liquids are transported by underground pipeline to Shell/Gulf's processing plant at Mossend in Fife, Scotland.

Statfjord has recoverable gas reserves estimated at 2.34 trillion cubic ft of which 370 billion cubic ft are attributable to the UK.

The announcement was the latest to benefit Scotland's growing electronics industry, which now numbers more than 300 companies employing 42,000 people.

Victor said it would use the East Kilbride company to service its European market. The main product line will be personalised shielded cables of the kind used to connect stand-alone keyboards to computer terminals.

The Scottish Development Agency has encouraged support activities for large computer companies.

Other companies in this sector are engaged in manufacturing silicon or servicing and producing equipment for companies such as Motorola, NEC, National Semiconductor and General Instrument, all of which have factories in Scotland.

The increased use of plastics in car manufacture is one of the main hopes for growth for the plastics industry worldwide.

Chemical executives pointed out that recycling of composite materials was likely to prove very difficult. They also argued that the increasing use of composite materials in aircraft manufacture was an indication of their quality and reliability.

They welcomed, however, Dr Habbel's call for increased co-operation between the two industries in solving the problems of plastics use in car manufacture.

British Gas takes first delivery of supplies from Statfjord field

BY MAURICE SAMUELSON

THE BRITISH Gas Corporation yesterday began receiving its first deliveries of gas from the Anglo-Norwegian Statfjord field in the northern North Sea.

The gas, delivered to the St Fergus terminal on the north-east coast of Scotland, is equivalent to about 1 per cent of Britain's daily gas supply and is a significant contribution to the domestic fuel requirement. Norway is expected to begin fending its own, much larger, share next Monday.

Agreements for the purchase of gas from the field were signed on Monday by British Gas and the field's UK licensees, Conoco, British and Chevron/Gulf. Deliveries are

expected to continue into the first decade of the next century.

Conoco is reported to be receiving 22.1 per cent, although neither the vendor nor purchaser will confirm this.

Seagram promotes malt whisky

BY LISA WOOD

THE BATTLE for market share in Britain's malt whisky industry has heated up yesterday with the announcement by Seagram UK that it is to spend £500,000 on pre-Christmas promotion of its Glenlivet malt whisky.

Mr Butterwick confirmed that the remainder of Parrot's board was in the process of being reconstructed on the management and non-executive sides. This should be completed by the end of the month, he said.

This is about 20 per cent of the total £2.5m being spent on advertising and

whisky by the industry this year.

Malt whisky is the one growth area in the otherwise static UK Scotch whisky market. It accounts for 2.6 per cent of total UK whisky sales.

In 1980 the UK market for malt whisky was 240,000 cases a year. This year it is estimated to be about

400,000 cases, with Seagram estimating sales of more than 700,000 cases by 1988. The brand leader is Glenlivet, distilled by William Grant and Son.

Seagram's other UK brands include Paul Masson, California wine and Sandeman port.

Scottish plant for Victor

BY MARK MORSE

THE VICTOR Corporation of Rhode Island, US, is to establish a plant in East Kilbride, Scotland, to produce coated cable assemblies for computers. The factory is expected to employ 200 people.

The announcement was the latest to benefit Scotland's growing electronics industry, which now numbers more than 300 companies employing 42,000 people.

Victor said it would use the East Kilbride company to service its European market. The main product line will be personalised shielded cables of the kind used to connect stand-alone keyboards to computer terminals.

The Scottish Development Agency has encouraged support activities for large computer companies.

Other companies in this sector are engaged in manufacturing silicon or servicing and producing equipment for companies such as Motorola, NEC, National Semiconductor and General Instrument, all of which have factories in Scotland.

The increased use of plastics in car manufacture is one of the main hopes for growth for the plastics industry worldwide.

Chemical executives pointed out that recycling of composite materials was likely to prove very difficult. They also argued that the increasing use of composite materials in aircraft manufacture was an indication of their quality and reliability.

They welcomed, however, Dr Habbel's call for increased co-operation between the two industries in solving the problems of plastics use in car manufacture.

Audi chief calls for cheaper car plastics

BY TONY JACKSON

PLASTICS used in the car of the future will have to be cheaper, more reliable and easier to recycle, according to Dr Wolfgang Habbel,

chairman of Audi.

Dr Habbel, addressing a conference of senior chemical industry executives in London, said that replacing traditional materials with plastics or composites was a question of innovation at zero cost.

"If one of my engineers brings me a new steering wheel which is lighter and looks better but costs DM 20 more," Dr Habbel said, "I will send him back to find something with the same characteristics at no extra cost."

The increased use of plastics in car manufacture is one of the main hopes for growth for the plastics industry worldwide.

Dr Habbel said the proportion of car Audi's unladen weight accounted for by plastics had risen by up to 5 per cent since 1982. Plastics now accounted for 13 per cent of the body weight of the Audi 100, against an average of 6 per cent for European cars overall.

On reliability, Dr Habbel said that chemically produced substances had to be suitable for volume production. "It is often the case that

manufacturing procedures for these materials are not up to volume production standards," he said.

Dr Habbel emphasised that new plastic materials used in cars must have to be recyclable. "We must assume that in 10 to 15 years from now it will no longer be possible to dump the plastic components being installed on cars today as they come out of the industrial shredders," he said.

"No car manufacturing company will be prepared to take the risk of investing in an overall car concept geared to maximum plastics compatibility, and therefore in new manufacturing facilities, as long as there are no practical solutions for the many problems of protection of natural resources and recycling."

Chemical executives pointed out that recycling of composite materials was likely to prove very difficult. They also argued that the increasing use of composite materials in aircraft manufacture was an indication of their quality and reliability.

They welcomed, however, Dr Habbel's call for increased co-operation between the two industries in solving the problems of plastics use in car manufacture.

TECHNOLOGY

EDITED BY ALAN CANE

Software for better diagrams

IT TOOK personal computer software manufacturers quite some time to develop the kind of programs which could mix text and graphics so that executives could produce illustrated reports.

Even now their capability is often limited, which adds extra interest to a new program from a U.S. company, Inner Loop Software of Los Angeles, which is designed to handle block diagrams on the screen.

Called—appropriately enough—Boxes and Arrows, it is a tool for designing and maintaining large block diagrams. It can also associate spreadsheet-like calculations with the objects in a diagram.

According to Mr Richard Gilman, president of Inner Loop Software, "it not only edits text, but also edits the boxes, points and lines that make up block diagrams."

"Like sophisticated computer aided design systems, Boxes and Arrows understands that lines are connectors so when you move an object, any lines connected to it are automatically re-drawn."

David Brown reports

from Stockholm on plans to test an engine which could make submarines less vulnerable to detection and attack

QUITE SOON the Royal Swedish Navy plans to saw one of its commissioned submarines in half. It will then lengthen it by six metres, install a unique new propulsion system and begin operational tests on an engine which may revolutionise conventional submarine warfare.

The new engine is expected to extend the submerged operational capability of non-nuclear submarines from three days to three weeks, eliminating the need for frequent "snorkelling" which makes conventional boats highly vulnerable to detection and attack.

The technology itself is not new. It is based on the Stirling engine, which was invented by

a Scottish priest in 1815. What is new is its underwater application; it will be the first air independent energy system for conventional submarines offering tremendous security advantages which are said to more than offset the price.

The underwater application is one of the few which can pay for an engine which costs some £100,000 for 75 kilowatts," says Mr Roger Sprinton, a former Royal Swedish Navy submariner who heads Kockums' submarine division.

"It's a bloody expensive engine but it solves a problem which can't be solved any other way for the time being."

Advances in anti-submarine warfare have made submerged and hidden endurance of such vessels increasingly important, and the exceptionally difficult operational requirements in shallow Swedish waters have forced the pace of this technological development.

The current standard technology is energy storage in batteries, which are recharged by an internal combustion diesel engine. This requires snorkelling for air on or near the surface.

The new system has been developed by Kockums, which builds Sweden's submarines,

and its United Stirling subsidiary. It allows submarines to carry their air requirement on board. In huge liquid oxygen tanks developed by the AGA industrial gas group.

The Stirling engine solves a number of serious technical problems relating to the recycling and venting of gases. As opposed to a standard diesel engine, it has a pressurised continuous combustion chamber—a submarine within a submarine.

The full-scale operational testing on the Swedish Navy vessel could set the stage for a broader-scale retrofitting on the new Visbygatan class submarines now under construction.

The Germans are also deve-

cruising depth—and also means that discharge, or telltale bubbling, is virtually undetectable from the surface.

The smaller scale system will soon be delivered to a French government sponsored programme for a 600 tonne research submarine being built by Comex de France. Kockums also has a smaller research and development contract with the U.S. Navy.

The project is so far advanced that it was included in Kockums' recent bid for the design of the new generation submarine for the Royal Australian Navy, which specified in its tender that "a minimum requirement for 'snorkelling' to recharge the battery" is an essential element.

Both Kockums and Howaldtwerke Deutsche Werft (HDW) of West Germany have been awarded \$2.8m contracts for development work on the AS2.6m project, the winner of which will be announced in 18 months' time.

The Germans are also deve-

loping an air independent system based on a different principle: hydrogen and oxygen are combined to produce electricity and water.

Although it has a higher output and is said to be quieter, it is also larger (a significant disadvantage in submarines where every inch counts). Some say it is significantly more expensive to operate.

Kockums has now entered the potentially lucrative field of designing sophisticated conventional submarines for foreign Defence Ministries. Similar tenders are expected from Canada and Australia in the near future.

Coming up for air: Näcken class submarine of the Royal Swedish Navy

Plessey steps into the computer aided design arena

WITH THE announcement of Megacell, a software suite that runs on the VAX mini-computer, Plessey is entering the computer-aided design and engineering (CAD/CAE) arena for the design of very large-scale "chips" using a keyboard and screen.

Plessey Semiconductors of Swindon, not so far directly associated with the CAD/CAE market, thus joins names like Mentor, Valid and Daisy. Megacell, however, is only available for use with Plessey's own-chip technology. There are no im-

mediate plans to make software available for general electronic design.

The need for such systems arises because designers in professional electronics need chips to their own specification—standard devices do not yield an exclusive product and usually cannot meet the system specification the designer is trying to achieve.

To design these application-specific circuits ("Asics") the choice ranges from the full "custom" chip, tailored precisely to the application, to the so-called "gate arrays"

in which pre-determined circuit elements on the chip are connected together during a final production stage.

Full custom development is both costly and lengthy but production costs are low. With gate arrays on the other hand, development is cheaper while production costs are relatively high.

Megacell lies between the two extremes. A hierarchy of "cells" (circuit elements) can be drawn from the computer's library by the designer with on-screen placing and routing

of interconnections and automatic logic simulation. If the available cells are not adequate he can design his own large-scale cells and keep them.

"Micrcells" are at the lowest level and consist of elements like gates, drivers and adders. "Farcells" are larger-scale units, automatically derived by the computer when the designer enters the basic operating parameters, and number of words that are to be stored in a memory.

"Suprcells" are large

chunks of circuit ready-designed by Plessey to perform commonly-used functions like digital-to-analogue conversion.

Megacell combines any of these elements to give the complete circuit to be fabricated on the chip. Up to 25,000 gates or 100,000 transistors can be accommodated.

Megacell software can be leased from Plessey for use on designer's own sites, or can be used at Plessey Semiconductor design centres

GEOFFREY CHARLISH

Statistics for engineers

A HAND-HELD unit for quality control engineers who need to obtain statistical process control information about mass produced components has been developed by Sellars Data-Systems of Manchester.

Called Dataputer, the unit consists of keyboard and four line liquid crystal display with a built-in microcomputer.

It can collect data, analyse it and produce statistical reports.

To collect data, the unit can be cable-connected to measuring instruments like micrometers, calipers, scales and height gauges from a wide range of manufacturers. By sampling the

data coming from the gauge, Dataputer can use its software to produce statistical analyses such as histograms and sampling control charts.

The new 3-D videodiscs are made by photographing the same subject with two different cameras, one from the left eye's perspective and another from the right's. These images are then recorded on a disc using the extra format specifically designed for the VED videodisc system.

The disc player will also be able to play ordinary, two dimensional discs.

CARLA RAPORT

Golden road to cheaper contacts

GOLD there may be in them, but a materials research company based in Salt Lake City, Utah, is working hard to put the hills into the gold.

Technical Research Associates (TRA) is a specialist in cermets, combinations of ceramic and metal which have remarkable properties. Slalom and boron can be combined, for example, to give a new material with strength, hardness and exceptional temperature resistance.

TRA reckons it can create a cermet based on gold (70 per cent by volume) but diluted with fine, fully-wetted completely dispersed silica particles.

The savings, according to M.C. D. Barker, TRA vice president, could be \$100m a year.

The new cermet will be castable and recyclable and will retain the properties of bulk gold in terms of resistance to corrosion and electrical conductivity.

It will have improved properties such as hardness and cold flow. The technique the company is researching to develop the gold-saving cermet was previously used to make an oxide dispersion strengthened aluminium.

NOTICE OF REDEMPTION

TRAILER TRAIN FINANCE N.V.

NOTICE TO THE BOND HOLDERS OF 13 1/2% BONDS
DUE 1ST NOVEMBER, 1992

Notice is hereby given that pursuant to the terms of the 13 1/2% Bonds, US\$3,400,000 principal amount of 13 1/2% Bonds has been drawn by lot by the undersigned for redemption on the 1st November, 1985.

The said 13 1/2% Bonds so called for redemption will therefore be redeemed on the 1st day of November, 1985 at 100% of the principal amount so called, plus accrued and unpaid interest to the date of redemption if applicable, upon surrender of the said Bonds with, thereto attached all interest coupons maturing 1st November, 1985, and thereafter at any of the following Paying Agents:

- Manufacturers Hanover Limited, 7, Princes Street, London, EC2P 2EN.
- Manufacturers Hanover Bank Belgium S.A./N.V., Brussels Head Office, Rue de Ligne 12, B-1000 Brussels.
- Manufacturers Hanover Trust Company, Bockenheimer Landstrasse 51-53, Frankfurt am Main.
- Manufacturers Hanover Trust Company, Stockerstrasse 33, 8027 Zurich.
- Manufacturers Hanover Trust Company, Corporate Trust Office, 49 Wall Street, New York, N.Y. 10001.

Notice is also hereby given that interest upon Bonds so called for redemption shall cease to be payable from and after the said redemption date, namely the 1st day of November, 1985, and coupons for interest maturing after the said date, namely the 1st day of November, 1985, shall be void.

The designating letter and numbers of the Bonds so called for redemption are:

Hats off to Nigel Mansell

A superbly driven race on Sunday to win The Grand Prix of Europe.

Of course, Nigel would be the first to admit it wasn't a single-handed victory. Congratulations should also go to everyone in Frank Williams's team.

Mobil is pleased to have played its part in helping Nigel to victory. In today's high performance cars, our advanced synthetic lubricant technology makes all the difference.

That technology is so good, it performs as well on the racetrack as it does on the road. It's called Mobil 1 Rally Formula.

So, a great win Nigel, here's to the next one.

Mobil 1 Rally Formula.

The world's most advanced motor oil.

THE ARTS

Television/Christopher Dunkley

When fiction is truer than fact

It is a long time since television screened a factual programme as memorable as Saturday night's *I Am A Fugitive From A Chain Gang* on BBC1. Of course calling it "factual" begs a lot of questions: this was actually an American movie with the parts all played by actors. Paul Muni taking the lead, and it was filmed in Hollywood studios and backlots. Moreover its "factual" nature might be questioned by those who knew that it was not "James Alix" but Robert Burns who was really sent to gaol in Georgia that his crime was stealing \$5 from a shop, not a hangover joint, and that after escaping from the chain gang he became a journalist, not a civil engineer as the movie has it.

Other viewers, less preoccupied with the authenticity of detail and more concerned with the ultimate significance of the work, would maintain that art is a lie which tells us the truth" and declare that in this movie the important truths were conveyed accurately enough: miscarriages of justice do occur; the chain gangs in the southern states were an in-

human form of punishment; and a man with a criminal conviction is indeed open to blackmail whether or not the conviction is justified.

The interesting point is that the ethical problems about "factual" film making which cause such widespread disagreement—the practice of mixing fact and fiction, the question of whether you should even try to re-stage actual events, the worry about whether a work of entertainment based on the lives of real people should be obliged to stick rigidly to verifiable facts—all emerge powerfully from this movie which was made by Wim Wenders 33 years ago.

Tonight the other side of the coin will turn up when Channel 4 shows the first of a 10-part series called *On The March*, concerned entirely with the famous American cinema newsreels, *The March Of Time*, which were started by Time Inc in 1935. Whereas *I Am A Fugitive* was entertainment which used current affairs for its raw material, *The March Of Time* was a current affairs series which quite openly exploited entertainment techniques, up to and including the

use of actors to impersonate real people.

To John Grierson, who was consultant for *The March Of Time* in Britain, the mixture of fact and fiction, entertainment and comment, apparently seemed not the least bit reprehensible. Writing of the series in 1937, he said: "In no deep sense conscious of the higher cinematic qualities, I have yet carried over from journalism into cinema, after 35 years, something of that bright and easy tradition of free-born comment which the newspaper has won and the cinema has been too abject even to ask for... It seems sensible for the moment that *The March Of Time* has won the field for the elementary principles of public discussion."

Though he was an innovator, a leader, and the maker of remarkable films, I believe Grierson did posterity a disservice when, having coined the word "documentary", he defined the form as "the creative treatment of actuality". He appears to have been quite unconscious of the morass which this sort of approach could lead us into, although it was clear enough to Sidney Bernstein.

In a 1937 essay published in the book *Footnotes To The Film*, Bernstein (then chairman of the Canadian Film Board—now a Canada group) wrote: "It is uniformly easy for the director of a film to handle his material in such a way as to present a picture which has all the appearance of truth, but which, in fact, is travesty. Seeing is so rarely disbelieving; and the adept cutting of a film, the subtle juxtaposition of shots, can convey, more cunningly than words or statistics similarly mislabeled, what nobody, presumably, would question their right to editorialise."

At the opposite side of the documentary spectrum was last week's *Probation* on BBC2 which "purported to convey no

more than a record of contemporary occurrences" but which, sure enough, also "implicitly expressed a point of view". The style was "fly on the wall", that process which some call "documentary" (and "perfor-mance" is the right word) when confronted by a film crew pointing lenses and microphones at them.

Half a century later the debate as represented by Grierson and Bernstein has scarcely progressed, although most of us now receive our news via the television rather than the newsreel screen. What has changed is the sheer volume of factual material: in the past week alone there were dozens of programmes which could be described more or less accurately as "documentaries".

At one end of the spectrum stands *Rough Justice*, the admirable BBC1 series made by producer Peter Hill and reporter Martin Young in which editorial comment is not merely included but absolutely essential. Young appears on screen to set the scene for a trial which Radio 4's called "a meeting of their ities", but which was never explained by the programme, though we gathered that the charge was originally criminal damage with intent. The unmistakable impression conveyed to the viewer was that a nice, quiet, hard working chap was being spitefully victimised by distant authorities.

Just as television's picture of the world over seas is so thoroughly unrepresentative as to amount to a misrepresentation because of the brutality of its documentarists in say, South Africa or Northern Ireland can easily be blamed while the far greater brutality of Soviet Russia or Iran is hidden from the camera, so here, with the man on parole, television enabled us to witness only one part of the picture. Granada TV alone has made methodical attempts to use "drama-documentaries" to reveal the methods of secretive totalitarian governments overseas, and the only way for

... Marches On

Probation to avoid misrepresentation would have been to re-enact the murder and the motorising offence—and leave aside the sad justice rules the BBC would presumably never dream of doing such a thing.

Clearly any documentary programme purporting to be "factual" lays itself open to accusations of offending by omitting. Yorkshire TV's otherwise excellent programme about the first female inmate at Sandhurst, *An Officer And A Lady*, left me wondering whether the girl from a comprehensive school could read the programme implied by showing no others—the only one to fail the course.

Having been 25 years ago, a keen proponent of the "Free Cinema" school with its documentaries such as *Momma Don't Allow* and *We Are The Lambeth Boys* and, in the 1970s, an equally enthusiastic follower of Roger Graef's fly-on-the-wall experiments in *The Space Between Words* and *State Of The Nation*, I now find myself more and more sceptical of the claims made for "accuracy" and increasingly well disposed towards those offering "lies which tell us the truth".

There are, of course, plenty of documentary programmes which do not use fly-on-the-wall techniques: BBC1's *Soldiers*, BBC2's *Now The War Is Over*, and *C'ds Love Affair With Nature* all lie outside that genre and we shall return to these—perhaps sooner even than the promised return to scratch video.

Time ...

The Passion of St Bach/Radio 3

Andrew Clements

"IT MAY well be that not every musician believes in God, but they all believe in Bach": Mauricio Kagel's motto on the composition of his *Passion of St Bach* defines his intentions. He has written musical homages before, most notably to Beethoven in the year of his bicentenary, but his anniversary celebration of Bach is much more elaborate and profound than anything of the kind he has attempted before. This has been performed last month as part of the Berlin Festival, and a recording of that premiere, a first-rate performance conducted by the composer, was broadcast on Radio 3 on Monday evening as the first concert in the 1985-86 series of EBU events.

If usually one thinks of Kagel as a slightly subversive, oblique satirist, more at home in creating vivid comic events than in composing large-scale musical arguments, the new work, which took nearly five years to complete, will come as a surprise. Certainly it is big—100 minutes without a break, and scored for narrator, three solo singers (mezzo soprano, tenor and bass), both adults and children's choirs, organ and orchestra—and absolutely serious. There is a grave intensity to the proceedings that generate increased respect for Kagel's achievements at each re-hearing.

The work is precisely what its title suggests: a *Passion* built around the life of Bach, that uses the structures of his Passions with their alterations

premiered in a date for the British premiere.

Kagel's own as is the unsettling music of many pastages, the orchestral colourings with their spare but telling use of percussions, and above all the extraordinary beauty of the delicately intertwined voices and instruments. In the concert hall it must have been quite bewitching. It would be nice to think the BBC had already per-

formed a task for the British premiere.

It is not surprising what its title suggests: a *Passion* built around the life of Bach, that uses the structures of his Passions with their alterations

premiered in a date for the British premiere.

What's supporting Fleet's share price?

On the surface, Fleet's share price performance since its demerger from Trafalgar looks impressive.

But Fleet shareholders must ask themselves a simple question: is the share price really justified by the company's trading performance?

Look at the facts behind the figures.

Windfall profits from the Reuters flotation gave Fleet shares a shot in the arm.

Bid rumours have played a significant part. And there have certainly been plenty of rumours.

As recently as 14th January 1985, the day before United Newspapers agreed to purchase 15.76% of Fleet's shares, the price stood at a mere 200p.

A price already inflated by strong hints of a bid.

Without rumours and without our generous offer, where would Fleet's share price be today?

United Newspapers plc

Newspapers, magazines, books, newsagents and satellite news. YORKSHIRE POST EXPRESS PUNCH

"WHEN I ran a business turning over £12m a year, I expected to know every day what was happening. Now I'm running an organisation that's turning over £1.5bn, I haven't the faintest idea," Peter Levene, Britain's new chief of defence procurement, corrected himself. "I have some idea, but I haven't any of the basic information which I really need."

Mr Levene, formerly chief executive of United Scientific Holdings, has been in charge since last March of buying all Britain's weapons systems, worth £35bn in 1985-86 and covered by 30,000 contracts with over 10,000 defence and other industrial companies in Britain and abroad. Insistently available information on those contracts and their progress is what Mr Levene wants, and he has brought into the Ministry of Defence an accountant "from the real world" to design a system by Christmas.

Mr Levene's appointment by Mr Michael Heseltine, the Defence Secretary, caused a stir in political and parliamentary circles when it was announced some months ago. There were accusations (later judged unfounded by the Commons Defence Committee) that the appointment of a former defence contractor to the post had breached rules of propriety, while Mr Levene's payment of £25,000 a year, caused resentment among lower paid civil servants, if not among some even higher paid defence company executives.

Mr Levene, backed by Mr Heseltine, has taken the criticism (now much muted) in his stride. In a wide-ranging interview last week, he made it clear that his main intention was to turn the 37,000-strong Procurement Executive that he now heads into a fully commercial operation.

In doing so, he is rudely disturbing what is left of the once close relationship between the Ministry of Defence and Britain's defence industries.

Defence contractors who had hopped from the civilian world of Mr Heseltine's now "value-for-money" policies over the past 18 months now find themselves experiencing something akin to an icy blast.

Mr Levene's targets are clear. Aged only 43, he became managing director of his company when he was only 26 and as he told the Defence Committee earlier this year, built it into one of Britain's larger defence contractors mainly by competing in export markets.

"I have an abhorrence of the whole idea that our defence industry is in existence to supply solely the defence needs of this country. We've got to export a hell of a lot, and I welcome enormously firms who regard the Ministry of Defence as a customer, an important

Peter Levene: "Alice in Wonderland" world of the MoD

UK DEFENCE PROCUREMENT

The big spender who drives a hard bargain

By Bridget Bloom, Defence Correspondent

customer, but not the customer."

The means Mr Levene is using to dislodge such wayward contractors centre on a drive to instil real competition into weapons procurement. Contract terms are being toughened and financial penalties for late deliveries or faulty equipment imposed upon Mr Levene plans changes within the Ministry, tightening project management and "gold plating" of equipment. In the armed services, none of these policies is new, but Mr Levene's vigour in pursuing them is.

There can be little doubt of the importance of what Mr Levene is trying to do. As he reminds you, the MoD is by far the largest single customer of British industry, with 95 per cent of the equipment budget (£28.5bn in 1984-85 and £29.1bn this year) being spent here.

There are four main areas directly affecting contractors where Mr Levene is intent on change:

• Competition: Mr Levene is endeavouring greatly to increase the numbers of contracts subject to real competition. Where this is not possible — usually because of a monopoly — contracts will involve incentives and penalties to ensure more efficient production and delivery. Mr Levene thinks he can "come close to abolishing" cost-plus contracts

— where the contractor is paid his costs plus a margin for profits, whatever happens to the project itself.

They were applied particularly to high-technology high-risk projects where the contractor was developing a weapon system at the front end of technology. Mr Levene accepts that in such circumstances, cost-plus must sometimes remain, but he is examining several big contracts with major suppliers to toughen their terms.

The most dramatic example is that for the Nimrod AEW. The contractor early warning radar system is being developed since the mid-1970s by GEC Avionics but has delayed the project by at least three years already. Mr Levene is negotiating a fixed price contract for the completion of development, insisting that the company will not be paid until the radar systems are delivered and working to the RAF's satisfaction. Such payment terms are virtually unheard of in the defence world.

• Contract terms: In an effort to introduce greater competition into areas where there are only monopoly suppliers — such as British Aerospace for military aircraft — Mr Levene is considering making it obligatory for prime contractors to put as much as 70 per cent of their work on major systems out to

competitive tender, as happens in the U.S. Limits will also apply to the value of sub-contracts which can be awarded to subsidiaries of the prime contractor.

• Exports: Mr Levene believes Britain's export performance could be improved if companies were more adventurous. He and the head of the renamed Defence Export Services Organisation of the MoD, Mr Colin Chandler, a former British Aerospace executive, are working to boost a "make it" approach to exports.

Mr Levene says that where UK contracts are opened up to foreign competition, substantial offsets should be a requirement, not optional extra.

• Collaboration: Mr Levene is an enthusiastic supporter of European collaboration in weapons production, not only because development costs are shared and production lines lengthened if two or more countries combine, but also because he believes that such collaboration increases competition by broadening the numbers of companies able to tender for work.

But if Mr Levene is concerned to sharpen the competitive edge of industry, he also foresees a shake-up in the Procurement Executive, not least in terms of trying to instill a greater awareness of the "real world" — which for him is the

commercial world — outside Whitehall. "Industry has spent a fortune on intelligence, finding out what's going on in the MoD, he says, insisting that "we should be equally well informed."

Mr Levene is unlikely to alter the structure of the PE organisation, which was designed by another industrialist, Lord Rayner, in the early 1970s. This contains a mix of military officers and civil servants grouped in three big controlles each buying for the three services. But he wants project managers to stay in their jobs for as long as they do in industry, and to be given greater responsibility.

However, Mr Levene says that overall the biggest "bugbear" in turning the MoD into a more commercial organisation is what is known as the annualities rules imposed by the Treasury, where ministers are required to spend in one budget year precisely what they have been allocated, no more, no less.

Two years ago, the MoD was given a dispensation to carry over undistributed amounts of some £300m from one year to the next. But this does not give enough flexibility, according to Mr Levene, who describes the "Alice in Wonderland" world of the MoD "pushing money out of the door" at the end of the year to pay contractors whether or not their performance matches its expectations.

Mr Levene agrees with his view that such a system "makes it virtually impossible to bring the normal commercial pressure to bear on contractors to deliver." He hopes, on the grounds that defence contracts are almost always stretched over a long period, to persuade the Treasury to increase the carryover to 10-15 per cent of the defence equipment budget, or around £1.5bn.

There is much evidence from

the U.S. that such a system is effective.

Mr Levene says that where UK contracts are opened up to foreign competition, substantial offsets should be a requirement, not optional extra.

Collaboration: Mr Levene is an enthusiastic supporter of European collaboration in weapons production, not only because development costs are shared and production lines lengthened if two or more countries combine, but also because he believes that such collaboration increases competition by broadening the numbers of companies able to tender for work.

Nancy Dunne visits a down-at-heel U.S. shoemaker fighting the flood of imports

Mother Goose struggles for survival

MR DAVID KESSLER, president of the Mother Goose Shoe Company in western Maryland, is haunted by a vision. Fifty women in China are sitting around a table in an unheated room lit by a single watt light bulb. They are carefully cutting leather with broken glass to produce shoes.

"If China ever gets organised it will destroy us completely," he predicts. "Not only us... but every product made in this country will be destroyed."

Mr Kessler is one of the few survivors in an industry overrun by imports, the son and grandson of shoe makers. His father emigrated to the U.S. from Germany early in the century. With \$2,400 in savings and loans, he and his brothers began to produce women's shoes in Baltimore.

They went bust during the 1930 depression, and went into retailing, but shoemaking is apparently in the blood. Mr Kessler senior set up a sewing machine in the backroom of his shoe store. His growing family lived on \$15 a week, his four children worked after school and eventually Mr Kessler opened another factory to produce children's shoes.

The sons joined the business after the second world war, and they moved out to Westminster, Maryland, population now 10,000, in search of a stable labour force—and thrived. But that was before the surge in imports.

Between 1983 and 1983, 402 U.S. shoe factories closed. Another 105 followed last year. The survivors are mostly privately held firms, producing fewer than 1m pairs a year. They are run by tough, lucky people who mostly specialise in types of footwear not made overseas.

The 170 workers in the Westminster Mother Goose plant—there is another plant with about 70 workers in Littlestown, Pennsylvania—make "popular price" shoes for the time being seen safe from foreign competition. "Children's shoes have to fit," said Mr Bill Isenberg, the operations manager.

"Overseas they don't make multiple widths." But production in the two Mother Goose plants has been dropping steadily since 1982, when the business had its most profitable year ever. The number of workers has declined from about 300 to 240. Like most of the small U.S. shoemakers,

Mr Kessler had high hopes that President Ronald Reagan, whom he supported and still likes, would grant the quota relief recommended by the International Trade Commission.

The Footwear Industry Association has taken its case for quotas to Congress, where a measure to provide import ceilings for eight years has been joined with a textile bill in the Senate. The industry needs time to modernise, says the FIA, but Mr Kessler says otherwise.

The costs of labour are the problem, he says, even though his non-unionised workers receive only about \$4.75 an hour. "How can we compete against Taiwan, where workers are paid 25 cents an hour, or China, where they get 10 cents to 15 cents. We have a modern building, all the amenities. We have conveyors, and computer stitching. OK, maybe we could put in some more computer stitching, but we don't even use those we have now to full capacity," he says.

"Those people in Korea, Taiwan, work six to seven days a week. They get two days off a month. There is no such thing as paying benefit." The Mother Goose officials maintain a "family atmosphere" in the plant, where mostly women work amid the smell of glue and clatter of the various machines. The workers earn bonuses for extra production or working out ways to save material. They are busy counting shoe pieces, stitching "skiving" edges. There is air conditioning, which has not been turned on, and piped music, which cannot be heard to school and Easter.

Meanwhile, the shoe industry is beset by other problems. Importers, say Mr Kessler, have driven up the cost of leather by buying heavily in the U.S. hide market. And the high cost of credit has hurt. Guarded about his company's earnings figures, Mr Kessler says he borrows "in the seven figures" during the year to build up stocks for the industry's two seasons—back-to-school and Easter.

President Reagan, the people in Maryland think, has been badly advised. He talks about the new jobs created. The Mother Goose officials say, but what about the unemployed? What good does it do in hold down inflation when people are losing jobs?

Those who stay with the company for 25 years get watches, says Mr Isenberg. Several have been presented. However, most of the women work on and off as their family situations demand. There are few other area employers who pay better.

Mr Kessler scoffs at the Administration's programme to retrain laid off shoe workers. "What are they going to do? Make them all lawyers, doctors? You cannot support a country on service occupations."

The U.S. has helped others with its technology but "it doesn't mean we have to give away an industry," he believes.

Hanson raises bid for SCM

By William Hall in New York

HANSON TRUST, the US industrial holding company, yesterday announced a \$75 per share cash tender offer for SCM, the New York conglomerate, in a last ditch effort to win control.

Hanson's decision to increase its offer for SCM for the second time follows a share buying spree last week during which it increased its stake in SCM to 32.1 per cent, effectively blocking the company's plans to go private with the help of Merrill Lynch, the world's biggest brokerage firm. The latter is providing the bulk of the finance for a \$74 per share management buy-out which is scheduled to expire on Friday.

Sir Gordon White, the chairman of Hanson's North American interests, said yesterday that SCM management had earlier recommended that shareholders accept an offer of \$59.20 in cash and \$14.80 in junk bonds and claimed that the new Hanson offer was "clearly superior".

The Hanson offer contains several conditions which SCM management and Merrill Lynch will find difficult to accept. It is conditional on SCM and Merrill Lynch breaking the controversial "lock-up" asset option agreement under which Merrill Lynch has the right to buy two of SCM's biggest subsidiaries—consumers foods and pigments—for \$430m.

The "lock-up" agreement is designed to prevent a rival bidder entering the battle and Hanson has stressed that the agreement allows Merrill Lynch to buy parts of SCM accounting for over half of the group's net earnings at less than seven times earnings—which it argues is too cheap.

The Hanson offer is also subject to the condition that SCM's consumer foods and pigments business and 30 per cent of SCM's funds and all other SCM assets which are being held in escrow for Merrill Lynch, be released and returned to SCM, without payment or agreement to pay additional cash to Merrill Lynch or any other party.

Sir Gordon said that he assumed SCM management would take all steps in its power to enable SCM's shareholders to "accept the new Hanson bid promptly." However, sources close to SCM said that there was little SCM management could do and it was up to Hanson to bargain directly with Merrill Lynch.

They added that SCM had signed an irrevocable agreement with Merrill Lynch if the conditions to exercise under the asset option agreement between the two parties are met and the option is exercised. See Lex

India set to sign £220m order with British aircraft makers

By JOHN ELLIOTT IN NEW DELHI

INDIA is on the brink of placing orders worth between £200m and £250m (£310m-\$325m) with the UK for Westland helicopters and British Aerospace Sea Harrier fighters.

It follows a \$75 per share cash tender offer for SCM, the New York conglomerate, in a last ditch effort to win control.

Mr Rajiv Gandhi, the Indian Prime Minister, who is due to arrive in Britain next Monday, has personally approved the purchase of the Westland W30 helicopters costing £35m to £38m. He opposed the order earlier this year but has changed his mind and the sale, backed with \$55m of British aid, is expected to go ahead after the Indian Government sets up a new helicopter corporation later this month. The deal would give a big boost to Westland's flagging sales.

Negotiations between British Aerospace and the Indian Ministry of Defence on the sale of 11 Sea Harriers, plus Sea Eagle missiles, are at an advanced stage. They may be completed by the end of this

week and the sale would be worth about £180m.

It is unlikely that any formal announcements will be made, or any contracts signed, during Mr Gandhi's two-day visit to the UK, which will include a visit to British Aerospace, but he is publicly acknowledging that the Westland contract is expected to go ahead. The projects are likely to be mentioned during the visits, however, and this will be seen by the British Government as a significant sign of improved relations with India, which have been clouded during the past year by the activities in the UK of Sikh extremists.

A possible sale to India of HMS Hermes, the British aircraft carrier which saw service in the Falklands war, for perhaps £30m may also be discussed during Mr Gandhi's visit.

Britain is also likely to press its case for one of the largest international defence orders now on the market—a £700m contract for a 155mm Howitzer gun. France is at

present believed to be the leading contender for the order.

Other missile contracts are also being discussed between the two countries, as well as a broad memorandum of understanding on defence sales and transfer of technology.

British Aerospace has been hoping to clinch its order for Sea Harriers since early this year and is this week making progress at negotiations in New Delhi.

India placed its first order for eight Sea Harriers in 1979, and these are now going into service.

The Westland order has run into several snags in the past year.

These have partly been caused by India's anger over the Sikh extremists' activities, partly by counter-attacks by Aerospaciale of France and finally by Mr Gandhi who had personally opposed the order.

Spain ready to set seal on transfer of Seat to Volkswagen

BY TOM BURNS IN MADRID

SEAT, the Spanish state-owned car manufacturer, hopes to transfer its administrative headquarters from Madrid to Barcelona by the end of this year. Negotiations for the company's acquisition by Volkswagen of West Germany are entering their final stages.

The "political" decision to control Seat is reported to have been made by VW, and the final round of talks is said to centre on outstanding financial details of the agreement.

Se Antonio Puerto, a leader of the Union General de Trabajadores (UGT) trade union, who heads the union's steel and metalworkers federation, said a possible date for an announcement of the Volkswagen acquisition was November 22. However, there was caution about naming specific dates.

The transfer to Barcelona, however, indicates that negotiations are into the final lap. Seat officials said the transfer would be undertaken urgently and that the aim was to have headquarters established in the Catalonian city by January 1 1986.

Volkswagen is understood to prefer the Seat headquarters to be in Barcelona, where the Spanish company's main car plant is located.

The move is expected to prompt voluntary redundancies among the nearly 1,000 Seat employees in Madrid.

Unions representing the Madrid employees have, however, signalled that they will strongly oppose the Barcelona move. A union-management meeting to negotiate the transfer is to take place next week.

A key feature of the Seat-VW negotiations is the proposed cuts in the Spanish company's 23,000 le-

vel force. Seat had suggested 3,000 redundancies while VW was seeking 6,000. Seat management and union sources said a compromise of 4,500 had now been agreed.

The negotiations have so far involved considerable Spanish efforts to place Seat on a secure financial footing. Accumulated losses since 1977 totalled Pta 160.5bn (\$70m) at the beginning of this year, with a profit deficit of Pta 35.7m in 1983.

The Spanish Government has written down the nominal Seat capital of Pta 36.5bn to nil, injected some Pta 42bn of capital and contributed a further Pta 21bn to cover the 1983 losses. The Instituto Nacional de Industrias (INI), the Spanish public sector holding company which at present wholly owns Seat, has allocated an additional Pta 45.5m over the next few years to aid the restructuring.

INI entered negotiations with VW after Fiat pulled out of Seat in 1980. INI's chairman Sr Luis Carlos Crosier, is anxious that VW should acquire an initial controlling interest in Seat prior to total absorption.

Under an existing agreement Seat is already producing Polo cars for VW at its Pamplona plant and Seat has access to the West German company's distribution network.

Volkswagen said yesterday that it had still taken no definite decision about the takeover and would not comment on the progress of discussions in Spain, writes John Davies in Frankfurt.

A key feature of the Seat-VW negotiations is the proposed cuts in the Spanish company's 23,000 le-

International Paper hit by redundancy costs

BY TERRY DODSWORTH IN NEW YORK

INTERNATIONAL Paper, the largest paper group in the U.S., suffered a severe profits setback in the third quarter when problems posed by a difficult trading environment were compounded by a heavy charge for redundancy costs.

Net income amounted to \$15.2m, or 16 cents a share against \$71.6m, or \$1.38 a share in 1984, while sales fell to \$1.1bn from \$1.2bn. Underlying earnings, however, before accounting for the \$22.8m charge, came to \$33m, or 64 cents a share.

Mr John Georges, chairman, said that profits were up modestly from the previous two quarters, but he expected them to continue to be affected by what he called weak pricing and demand environment in the industry.

International Paper has instituted a cost reduction programme in the face of its decline in earnings this year, including a cut in its salaried workforce of about 1,000 people. This will be achieved primarily through a voluntary retirement programme. The third-quarter charge is for pension expenses for employ-

ees taking advantage of this scheme.

• Höhmanns Bruk of Sweden, Europe's biggest manufacturer of newsprint, increased its profits by 11.5 per cent to SKr 122m (\$24m) in the first eight months of the year.

The group, which has recently commenced a new SKr 700m newsprint mill, increased sales to SKr 2.37bn in the period from January to August, from SKr 2.08bn in the same period last year.

Höhmanns Bruk now has a capacity to produce 700,000 tonnes a year of newsprint and a total capacity of more than 1m tonnes including other grades of printing papers.

Höhmanns Bruk demand for newsprint continued to grow during the first eight months, although at a slower rate than in 1984. The group's paper mills operated at close to full capacity.

The market for magazine paper has weakened somewhat during the year as a result of a slowdown in advertising volumes.

Overall, its plants are expected to operate at around 95 per cent of capacity for the whole year.

Two-pronged attack on jaded Eurobond investors' appetites

SYNDICATE managers were working hard to stimulate Eurobond investors' falling appetites yesterday, writes Maggie Urry in London.

Two approaches were adopted: either a straightforward issue for a good name borrower or a deal combining with a currency play or warrants.

In the first category was a deal from Japan Finance Corporation for Municipal Enterprises which has a state guarantee. Lead manager IBI International priced the \$100m 10-year issue to appeal to European investors, who demand higher yields, as well as Japanese. The coupon was set at 10% per cent and issue price at 100%. With fees of 2 per cent, the all-in cost is 10 basis points above U.S. Treasury yields. The bonds were selling well at up to 98%.

Similarly J.P. Morgan is a popular name in the Eurobond market, although its debt is now rated AA+ by Standard & Poor's and AAA by Moody's. Also for \$100m, this has a seven-year life and lead manager Morgan Guaranty fixed a 10% per cent coupon with a 90% issue price. Fees total 1% per cent and the bonds were trading comfortably within that discount.

Morgan Stanley combined the two ideas by bringing Gaz de France, which has a French guarantee making it top quality, with an innovative structure. The \$100m issue has a 10-year life and can be called after five years. It comes with 100,000 warrants to buy a bond with the same maturity, November

Paul Taylor in New York looks at why a cosmetics group is so attractive

Revlon catches eyes on Wall Street

Wednesday October 9 1985

REVLON, one of the world's best known cosmetics groups, has been under siege for almost two months. In mid-August, Pantry Pride, a relatively small Florida-based supermarket, drugstore and retail group, launched the initial assault with a hostile takeover bid valuing the group at about \$1.8bn.

The bid came after Revlon had off negotiations with Pantry Pride and threw up an impressive array of anti-takeover defences, including a poison-pill defence triggered if an unwelcome suitor acquires a 20 per cent stake. It also launched an extensive share-buy back programme.

But neither Pantry Pride, nor its chairman Mr Ronald C. Perelman, were about to give up. Pantry Pride and its privately-held New York-based parent, MacAndrews and Forbes, had spotted that Revlon was worth more than Wall Street investors had estimated.

Before Pantry Pride's initial \$27.50-a-share bid, Revlon's stock had been trading slightly above \$40, valuing the company at around \$1.5bn.

What made Revlon doubly attractive was that aside from its line-up of top-name beauty care products, the lipsticks, perfumes, eye make-up and nail polish that once prompted

Mr Michel Bergerac, its chairman, to describe the company as "selling hope and dreams", Revlon has a fast growing health care business.

The cosmetics products are what Revlon is internationally best known for and are the legacy of the group's legendary founder, Mr Charles Revson, who started the company with \$300 in 1921 with his older brother Joseph, and Charles Lechman (the source of the "L" in the Revlon name).

But while beauty products still generate 48 per cent of Revlon's \$2.4bn annual sales, it is the group's disparate health care operations - ranging from ethical drugs to diagnostics and vision care products - which have become the real money spinners.

Revlon's health care operations, built up and nurtured by Mr Bergerac, a former president of ITT Europe, since he was brought in by Mr Revson to run the company in 1974, generated 66 per cent of the group's \$259.3m in operating profits last year.

Pantry Pride's purported intention to sell Revlon's health care operations, may help explain Mr Bergerac's initial denunciation of the offer as a cheap attempt to

"bust up" the company.

But late last week, to the surprise of Wall Street, Mr Bergerac and the Revlon board put their names to another bust-up proposal. This time, Forstmann Little, the New York leveraged buyout specialists, offered \$36.50-a-share in an agreed bid which would split Revlon three ways.

Pantry Pride, undeterred by law suits, Revlon's poison pill - which would allow shareholders other than a hostile bidder to swap one share for \$35 face amount of 12 per cent one-year Revlon notes - and the repurchase of 10m Revlon shares adding \$75m to the group's debt, kept up its relentless pursuit of the offer to \$33-a-share just before Forstmann Little stepped in.

Under the terms of the Forstmann Little offer, Revlon would sell off its cosmetics business - and the Revlon name - for \$900m to Adler and Shaykin, another Wall Street investment firm.

Its Reheis specialty chemicals and Norcuff Thayer unit, which makes antacids and other over-the-counter preparations, would be sold to American Home Products for a reported \$350m.

The Forstmann Little group,

which includes Mr Bergerac and other senior managers, would end up with the bulk of the health care segment - a business that, on its own, some Wall Street analysts believe could be worth about \$1.8bn.

But while some on Wall Street believed the combination of Revlon's poison pill anti-takeover defences and the attraction of an agreed bid would prove a decisive blow in the battle for Revlon, others were not so sure.

In particular, they noted that the Forstmann Little bid was still below the \$33 a share Mr Bergerac himself had said the company was worth, and they noted that the bid, although agreed, did not contain the now customary "lock-out" clauses which might stall a rival offer.

Finally they noted that the other recent deals, like Philip Morris' \$5.8bn planned takeover of General Foods and Procter & Gamble's \$1.55bn agreed offer for Richardson-Vicks, have established a premium price on Wall Street for consumer products companies with big brands.

On Monday Pantry Pride came back into the battle again. This

time the group offered \$36.25 a share and linked it with a blistering verbal and legal attack on Revlon's tactics the "golden parachute" payments to Revlon managers and the \$25m fee Revlon has agreed to pay Forstmann Little, even if the buyout deal is not completed.

To back its latest bid Pantry

Pride which reported net earnings of just \$4.5m on sales of \$77.6m last year, said it has lined up full financing, including \$750m in cash and bank loans of \$750m with the remainder to come from a private placement of debt securities through Drexel Burnham Lambert, the Wall Street junk bond specialists.

While the outcome of the battle for Revlon is still undecided - Revlon is rumoured to have been approached by several "white knights" even before the Forstmann Little deal was announced - one thing is clear.

Revlon, which once only made money by making women look more glamorous, has ended up making itself an eye-catcher on Wall Street as the value of its stock has risen by over 30 per cent since before the battle began.

The properties being sold are separate from the oil and gas properties which Sun has put up for sale because they do not meet its return requirements. Sun is asking a \$170m after-tax charge in its third quarter on the sale of these assets, proceeds of which will also be invested in Sun Energy Partners.

Sun's shares, which fell sharply last week after the restructuring announcement, shed another 3% to \$50 in early trading yesterday. Investors were disappointed that the company was not transferring units of the MLP, which will contain the group's U.S. oil and gas reserves, directly to shareholders and was instead going to sell off 2 per cent to 3 per cent of the MLP units each year of finance exploration.

The company has indicated that it is working on plans to allow its shareholders to buy units on favourable terms.

Moulinex blames slump in demand for loss

BY PAUL BETTS IN PARIS

MOULINEX, the French kitchen equipment manufacturer which earlier this year linked up with Söderby of the U.S., reported yesterday a first-half net loss of FF 17m (17m).

The company, which has been hit by sluggish demand in some of its major markets, was expected to show lower first-half results but not a loss. In the first six months of last year, Moulinex reported net earnings of FF 31.8m.

Parent-company sales in the first half rose to FF 1.5bn from FF 1.4bn in the year-before period. Op-

Manville warns of write-off

BY OUR NEW YORK STAFF

MANVILLE, the U.S. building and forest products group which is attempting to reorganise under the Chapter 11 bankruptcy law following the filing of billions of dollars in asbestos-related health claims against it, warned yesterday that the group will post losses for the third quarter and full year. This follows a \$180m pre-tax charge it expects to take against third-quarter earnings.

The Denver-based group, which recently approved a reorganisation plan under which it would eventually pay \$2.5bn to asbestos victims, said the charge relates to the sale

or shutdown of several operations and forms part of an extensive new business plan which also involves \$78m in capital spending over the next five years.

The planned charge covers various strategic moves including the previously announced plan to close an aerospace insulation and industrial sealing parts factory in Manville, New Jersey with the loss of 850 jobs, the closure of facilities in Marrero, Louisiana, the shutdown of unprofitable residential roofing operations and the sale of most of the group's Canadian operations.

In the year-ago third quarter,

Beijer buys Munksjö stake

BY OUR STOCKHOLM CORRESPONDENT

INVESTMENT AB Beijer, the Swedish investment company, and the Munksjö paper group which has recently diversified into financial activities, have strengthened their ties in a series of cross-purchases valued at about SKr 200m (\$25m).

Beijer, allied with financier Mr Anders Wall, has bought a 17 per cent voting stake in the paper

group worth about SKr 130m and becomes its single biggest shareholder. It is said to be interested in further increasing its holding to about 20 per cent.

Beyond its paper activities, which generated a profit of SKr 15m last year, Munksjö has cash and liquid assets worth about SKr 800m.

14 per cent to SKr 345m, but costs grew faster, yielding an operating result after depreciation of SKr 337m, down SKr 10m.

A slight decline in the net financial burden was outweighed by a rise in extraordinary costs.

Investment levels climbed sharply from SKr 16m to SKr 270m, due in large part to acquisitions, but also to the addition of new capacity in several areas.

Adjusted group sales climbed by

14.5% to \$1.35bn, up 11.5%.

Customers' deposits rose 23.6%

Capital, reserves and borrowed capital increased 18.2%

Provisions rose 29.0%

INTL. COMPANIES & FINANCE**Record gold prices for CGF reflect weak rand**

BY KENNETH MARSTON, MINING EDITOR

RECORD gold prices averaging R22,201 per kilogram have been received in the September quarter by the seven South African gold mines in the Consolidated Gold Fields (CGF) group. This 8.8 per cent increase over the June quarter average reflects the weakness of the rand against the U.S. dollar in which gold sales are made.

Gold output in the latest quarter has fallen to 30,924 kg from 32,687 kg as a result of lower ore grades being milled at all of the mines.

The average increase in working costs of 4.5 per cent to R78.26 per tonne ore milled compares with a 10 per cent rise in the previous three months and largely reflects the July wage increase for black mine-workers.

The result is that, at net level, aggregate earnings for the quarter have declined to

Sept. June Mar.

R'000 R'000 R'000

	Sept.	June	Mar.
	R'000	R'000	R'000
Deelkraal	10,111	12,111	12,111
Doornfontein ..	18,284	18,284	16,487

tax level have risen to R453.3m

from R445.6m and Doornfontein shows up well at this stage with a profit of R26.9m against R22.6m. Tax charges, however, are generally higher in line

In the case of Driefontein Consolidated, earnings have been affected by a further fall in grade at the East section while lower grade has also reduced gold production at Libanon and the more marginal Venterspoort. Increased tax has left Doornfontein with an unchanged net profit.

While the earnings performance of these mines may seem disappointing in the light of the recent gold price received, costs have been well contained after the round of wage increases labour accounts for more than 50 per cent of the industry's costs.

With a seasonal reduction in the tax-offsetting capital expenditure

the result is that, at net level,

aggregate earnings for the quarter have declined to

How to sell Malaysian subsidiary

By Wong Sulong in Kuala Lumpur

DOW CHEMICAL of the U.S. has announced a restructuring plan for Pacific Chemicals Berhad (PCB), its Malaysian subsidiary, under which Dow will receive a cash payment of 7.4m ringgit (US\$3m) for giving up the publicly listed status of PCB.

Under the deal, Dow will sell its entire 51 per cent stake in PCB, amounting to 1.061m shares to four Malaysian businessmen for 13.20m ringgit. The buyers are Mr. Tan Koon Suan, Mr. Kayeon Musaikum, Mr. Low Chee Kin and Tan Sri Nasaruddin Mohamed.

Before this, PCB will transfer its entire chemical business to a new company, Pacific Chemicals Malaysia, PCB, for 5.5m shares with a par value of 5.5 ringgit each.

PCB will then sell 51 per cent of PCB to Dow Chemicals for 5.61m ringgit, and another 29 per cent to Tan Sri Nasaruddin and Mr. Kayeon for 3.18m ringgit.

Dow would also be entitled to receive a dividend of 1.67 ringgit per share which PCB would declare.

Manila cuts commercial bank reserve deposits

By SAMUEL SENOREN IN MANILA

THE PHILIPPINE central bank has cut by one percentage point to 23 per cent the level of reserves that commercial banks are required to place with it against deposit liabilities.

The move is intended to free as much as 1.6b pesos (\$53.6m) in funds as part of Government efforts to relate the economy, which shrank by 4.6 per cent in the first semester.

Monetary officials hope that with more funds available and interest rates easing, business will pick up. Local bankers however, are not as optimistic. Some think the central bank action is an exercise in futility. Generally, businessmen do not want to resume activity at previous levels for fear of undisturbed stock.

According to monetary authorities, inflation in September had gone down to 12.7 per cent from slightly over 15 per cent in August, but economists said the reduction was more the result of increasing

consumer resistance rather than a sign of economic recovery.

President Ferdinand Marcos has, meanwhile, raised the authorised capital of Philippine Deposit Insurance Corporation (PDIC) from 20m to 25b pesos.

PDIC, created in 1983, is the insurer of all deposits of the banking system but the maximum amount of coverage is only 40,000 pesos per depositor.

There has been public agitation for some time to have the amount of insurance raised, following a spate of bank failures.

Most of the insured deposits with the failed banks have remained unpaid because PDIC does not have enough money.

Mr. Marcos hopes that the PDIC measure will restore confidence and stability to the banking system which has been in some distress since a massive capital flight occurred in 1983.

Philippines to privatise three mineral companies

By LEO GONZAGA IN MANILA

MR CESAR VIRATA, the Philippines' Prime Minister, has announced that three government-owned mineral entities are to be offered for sale to the private sector.

The three, all offshoots of the defunct Marinduque Mining and Industrial Corporation are Nonoc Mining and Industrial, which operates a nickel mine and refinery complex in Nonoc (Surigao del Norte, Southern Philippines); Marcamul Mining, operator of a copper mine and mill in Sipalay (Negros Occidental, Central Philippines); and Island Cement, which operates a limestone quarry

and cement plant in Antipolo (Rizal, south of Manila).

The three were formed after Marinduque Mining was taken over and then closed by the state-owned Development Bank of the Philippines and Philippine National Bank following a default on debt payments.

Meanwhile, Atlas Consolidated Mining and Development has temporarily closed two open-pit mines and another two of its ore concentrators in its copper property in Toledo (Cebu, Central Philippines) in line with a retrenchment programme. This follows the previous closure of an open-pit mine and concentrator.

Local bankers say there has been no sign yet of the promised \$1.5b in government deposits promised by the Finance Minister last summer. Most now believe that, although approved in principle, the assistance package for the banks will have to be debated as a separate item by the Kuwait parliament.

Political observers believe that parliamentary deputies may prove unwilling to provide public money to help out Kuwaiti banks and that conditions will be imposed on the assistance.

Asia Terminals stake sold

SEA-LAND of the U.S. has approved the HK\$300m (US\$38.6m) purchase by New World Development of Hong Kong of a 49 per cent stake in Asia Terminals from Far East Consortium (AP-DJ) reports from Hong Kong.

Sea-Land owns 50 per cent of the container terminal venture and had final say in the transaction between Far East and New World.

INTERNATIONAL COMPANIES AND FINANCE

Océ result boosts dividend

By Our Financial Staff

Océ, the Dutch copier group, reports further strong profits growth for the third quarter of 1985 and is stepping up its interim dividend.

Third-quarter net earnings have risen by 23 per cent to Fl 17.5m (£5.97m) to lift profits for the first nine months to Fl 51.9m, against Fl 43.7m.

The interim dividend is rising from Fl 4.30 a share to Fl 4.50. For 1984, Océ paid a total dividend of Fl 9 following an increase in net profits to Fl 64.6m.

Turnover for the quarter rose to Fl 472.6m, and Fl 1.45bn for nine months, up from Fl 1.28bn. Office systems sales rose 25 per cent in nine months, while design engineering turnover improved by 5 per cent.

1st NOVEMBER 1985 REDEMPTION

BRITISH LAND INTERNATIONAL N.V.

U.S.\$16,000,000 8% LOAN 1987

REDEMPTION OF BONDS

British Land International N.V. announces that for the redemption period ending on 1st November 1985 it has purchased and cancelled bonds of the above Loan for U.S.\$756,000 nominal capital and tendered them to the Trustees. The nominal amount of bonds to be drawn for redemption at par on 1st November 1985 to satisfy the Company's current redemption obligation is accordingly U.S.\$84,000 and the nominal amount of this Loan remaining outstanding after 1st November 1985 will be U.S.\$3,250,000.

DRAWING OF BONDS

Notice is accordingly hereby given that a drawing of bonds of the above loan took place on 20th September 1985 attended by Mr. William Brignall Kennair of the firm of John Venus & Sons, Notary Public, when 84 bonds for a total of U.S.\$84,000 nominal capital were drawn for redemption at par on 1st November 1985, from which date all interest thereon will cease.

The following are the numbers of the bonds drawn:

UK COMPANY NEWS

Bowthorpe surges 15% to £11.5m

Bowthorpe Holdings, designer, manufacturer, and seller of accessories and components for the electronics, telecommunications, aerospace, and electric supply industries, increased pre-tax profits by 15 per cent to £11.45m in the six months to June 30 against £9.93m last time.

Group sales soared by 22.3 per cent from £52.22m to £64.14m and Mr Ray Parsons, executive chairman, says he remains confident that the group will achieve record profits for the year. However, he warns that he does not expect them to reach the targets for the year. In 1984, the profits for the year were £20.1m.

He says that, although sales were at record levels, orders were only 16.2 per cent better than last time.

UK sales exceeded budget, he

says, but pressure on margins persisted and operating profits of the UK trading group were only a shade higher.

The overseas subsidiaries and related companies provided a more heartening result, he says, with the budget for both sales and pre-tax profits being exceeded.

The interim dividend is raised 0.26p to 2.33p a 10p share.

Trading profits were £10.25m up 27.27%. Operating profits of £10.95m (£8.18m) included a consequential loss on the claim of nil (£283,000) and the share in the profits of related companies of £608,000 (£281,000). Pre-tax profits included net interest and similar income of £24,000 (£1.74m).

Tax took 24.99m against 4.8m and minorities 247.2m.

CCA Galleries lifts profits 34% halfway

Strong trading both at home and overseas has produced encouraging progress at CCA Galleries in the first half of 1985, the directors state. The 34 per cent rise in pre-tax profits from £213,000 to £288,400, is in line with the forecast made in July when the company joined the USM.

Turnover for the half year increased by 28.5 per cent to £2.02m (£1.36m), and the company, which publishes and markets signed original prints and sculpture, has achieved the results against a background of fluctuating foreign exchange rates, particularly in sterling against the US dollar.

The directors say they keep an exposed position constant review, and take steps to minimise adverse effects.

The move by the company to do business under its own identity from its former majority shareholder, Christie's International, and to maintain the momentum of its growth, continues satisfactorily, they add.

As outlined in the prospectus no interim dividend is being paid, but the directors intend to recommend a final of not less than 10 pence share. In future years there will be a third of the dividend, as one-third for the interim and two-thirds for the final payment.

The tax charge increased from £109,000 to £122,900.

Zero Bond Fund is launched

THE GROWING market in zero coupon bonds, broadened last month by the issue of ZEBRAS bonds by the government securities, has now led to the creation of a fund, Zero Bond Fund, to invest solely in such securities.

Banque Arabe et Internationale d'Investissement (BAII), a Paris-based consortium,

and Sheppards & Chase, the London stockbroker in

which the BAII has a 16 per cent stake, have each secured undertakings to invest \$10m, but with an eventual target of \$20m and a second target of \$21.7m.

BAII and Sheppards & Chase will manage the fund, which will be an open-ended investment company incorporated in Guernsey. Listing will be sought

on the London Stock Exchange for participating shares.

The initial subscription price for each share is £10.50, including a 50 cent preliminary charge.

The fund will be denominated in dollars and will invest primarily in dollar-denominated securities.

Zero coupon bonds pay no interest and are sold at a deep discount to face value. Investors receive no income, but a large capital gain on the expiry of the bonds. The new fund's objective is thus to obtain long-term capital growth, with any surplus being retained within the fund and not distributed as dividends.

Zero coupon bonds were created partly to benefit investors' tax positions, and have found a ready market particu-

larly among Japanese institutions as well as offshore investors of the type that normally invest in the Eurobond market.

The funds is not aimed at UK investors, and particularly not at the general public who would have gains taxed as income. It is aimed at typical investors in zero coupon bonds who desire a diversified portfolio. The managers plan to trade bonds within the fund reflecting market movements and interest rate trends.

About half the portfolio is likely to be invested in instruments such as STRIPS, CATS and TIGRS—all different brands of US securities created by the separation of US government securities from their coupons.

London & Edinburgh up 58%

LONDON & EDINBURGH Trust, property developer and investor, increased pre-tax profits by 38 per cent to £2.28m in the six months to June 30 against £2.00m last time.

Mr John Beckwith, chairman, Turnover expanded by 8.5 per cent from £13.8m to £22.72m.

He says the indications are that full year profits will be significantly higher than last year's £5.15m before tax.

The interim dividend is increased from 10p to 30p and Mr Beckwith said shareholders had several important letters and planning consents have been agreed for the first half which should contribute substantially to profits in 1985 and 1987.

In addition, a number of exciting new projects have been acquired, which should help to ensure the continued growth in

profits and therefore dividends," he says.

Net rental income for the half year rose from £581,000 to £898,000. Interest receivable was £408,000 (£254,000) and payable £278,000 (£396,000).

Tax took £220,000 (£430,000) and minorities £19,000 (£11,000), giving attributable profits of £2.42m (£1.63m).

Interim ordinary dividends accounted for £540,000 (£450,000) and preference dividends £69,000 (£11,000), giving retained profits of £1.83m (£1.13m).

Earnings per 10p share were up 30p to 13.16p.

● comment

LONDON & EDINBURGH Trust's innovative approach to putting together high-tech office developments appears to be paying off. Its track record in assembling

the right sites, producing the sort of buildings that tenants want and lining up institutional investors to back its developments is probably unrivaled. In the '70s development it has carried over the last 18 months or so, only one has come close to going wrong. Income tends to be lumpy but this year should produce profits of at least £7.5m. After a 28 per cent tax charge, the shares, up 6p at 340p yesterday, are on a prospective P/E ratio of 12—figure a good multiple, particularly given that there is nothing with which L&E can be compared. The

shares look good value given that the 50 or so developments in the pipeline assure "good profits growth for at least two years hence; but how rapidly growth can be sustained beyond that is another question."

Abbey board reject French Kier offer

By Frank Kane

The £20m offer from French Kier Holdings for Dublin-based construction group Abbey, already supported by 26.4 per cent of Abbey's shareholders, has met with the near-unanimous rejection of the Irish company's board of directors.

Mr Charles Gallagher, chairman of Abbey and controller of nearly 30 per cent through his family-controlled Gallagher Holdings, said yesterday that the offer was "totally inadequate" and strongly advised his fellow holders not to take action. In response to Kier's invitation last Monday to talk on the offer, Mr Gallagher said, "There is nothing to talk about. We do not want to talk at all."

The cash and paper offer values Abbey at around 85p per share, with a 30p per share cash alternative. The company's shares, which are quoted in London, closed last night at 85p, up 3p.

Mr Alan Fretton, French Kier's chief executive, said that the response was disappointing. "We had been hoping at least to get the opportunity to talk to them," he added.

But he refused to regard the chairman as a mere "hurdle". Kier was prepared to go unconditional at 50 per cent, he said, and the formal offer document would be posted to Abbey shareholders as early as next week.

French Kier's bid appears to have been stalled by a long-drawn-out battle between members of the Gallagher family. The 34.6 per cent already pledged are controlled by Charles' brother, Mr Patrick Gallagher, and his son, Mr Seamus Gallagher—the only dissenting member to the board's rejection.

The approximate 33 per cent outside the family hands are with Irish institutional holders and small investors.

Bromsgrove considers acquisitions

Bromsgrove Industries would commit itself to growth through acquisitions and there were matters under consideration, said Mr J. M. L. Ormerod, the chairman, at the annual meeting.

He said that himself and Mr H. F. Kimberley, the managing director, who own 47 per cent of the shares, had had no objection to further share issues to fund acquisitions despite a possible material dilution of their holding.

He was encouraged by the performance in the first half of the year and said that Mr Geoffrey Aliman, a senior partner in Pepper Rudman, and a partner in Stay Hayward, had been invited to join the board.

Investment costs have the expected impact on NMW

By Frank Kane

A LARGE investment in a range of new activities within the company over two-year period, will have the expected impact on the first half results at NMW Computers, which provides accounting services and talisman facilities.

NMW has continued its major programme of development in readiness for the deregulation of the securities industry, and the opportunities brought about by the changes in the industry have necessitated the large investment.

The development programme is proceeding and will make a significant contribution in the second half of the year, says Mr E. B. Bibby, the chairman.

The company's preparations with Ciftope to form a jointly owned company are proceeding to plan. It anticipates the new organisation becoming an independent clearing member of the London Stock Exchange, acting as a settlement and dealing agent for medium-sized firms.

Mr Bibby says he looks forward to the company's new systems being in place before deregulation next autumn, and to a continued high level of sales as the demands for increased efficiency are generated in the new environment.

Commenting on the acquisition 12 months ago of Timon, he says its products are being developed ahead of schedule. The effect of the race to develop new systems before deregulation has produced a loss during the first six months of this year.

Mr Bibby says that Timon's selected sites are very promising, however, and should ensure that Timon will become profitable in the second half.

Group trading profits in the opening half were down from

£785,000 to £674,000. Net interest receivable was £84,000, against £89,000. UK tax was unchanged at £297,000 and net dividends of £135,000 (same), retained profits were lower at £276,000 against £415,000.

The interim dividend is raised from an adjusted 2.1p to 2.5p, and stated earnings per 25p share of this USM company were down from 10.2p to 7.8p.

● comment

The downturn in profits from NMW Computers should set none of the alarm bells ringing by the poor results of other companies in the sector.

Realising this, the market reversed its initial gesture that wiped 15p off the share price, and the shares closed little changed at 250p.

The drop in profits was the result of higher costs of developing and maintaining the firm's existing business to equip it with more services and extra capacity to cope with a projected increase in Stock Exchange volume. Losses made by Timon in the first six months reflected the cost of developing an investment management system, for which expected sales in the second half should bring this newly acquired part of the business into profit by year-end.

However, it will not be until 1988 and beyond that the real rewards from all the development work will be felt.

Mr Bibby says he looks forward to the company's new systems being in place before deregulation next autumn, and to a continued high level of sales as the demands for increased efficiency are generated in the new environment.

S. W. Farmer £0.3m in red but sees improvement

LOSSES OF £284,000 have been suffered by S. W. Farmer Group for the six months to June 30 1985, compared with a £16,000 pre-tax profit in 1984.

The results show underlying improvement, however, Mr Brian Farmer, the chairman, says. Second, he adds, the company's performance has returned to profitability and the areas of difficulty have been contained.

He was encouraged by the performance in the first half of the year and said that Mr Geoffrey Aliman, a senior partner in Pepper Rudman, and a partner in Stay Hayward, had been invited to join the board.

He adds, but they consider that the worst problems seem to be over and view the future with more confidence. He expects 1985 to be a year of consolidation, and there are already indications of improved business for 1986.

Fro this half group turnover was little changed at £8.36m. There was a £1,000 loss from the associated companies.

After no tax charge (£8,000) and a £160,000 (£6,000) extraordinary debit attributable losses were £454,000 against a £2,000 profit last time. There were £2,000 losses before extraordinary, which were 1.16% against earnings of £2.2m. Losses after extraordinary were £17,976 (£0.09p). There is no interim dividend.

The directors regard the pre-

Sparrow rejects £6.3m bid from BET

By Charles Bachelor

G. W. SPARROW & SONS, a leading crane hire group, yesterday rejected a £6.3m takeover bid from BET, the international services group, formerly known as British Electric Traction.

The BET bid, announced earlier this month, came four days after Sparrow, based in Bath, announced that reorganisation costs had pushed it into the red in the six months ended June 1985 against a pre-tax profit of £262,000 in the comparable period.

Sparrow directors, led by Mr Alf Sparrow, chairman and Mr Angus Lyons, managing director, travelled to London yesterday to seek a merchant bank to advise on defence tactics.

BET said the aim of its bid was to strengthen its position in the £100m crane hire market, by adding Sparrow's capacity to that of its own subsidiary, Grayston White.

Small independent companies account for more than half of this market and their ability to operate on lower margins makes life difficult for the four major groups, BET said.

Grayston White is the smallest of the big four, which comprise Scott Greenham, which obtained a Stock Market listing in April, and Hewden-Stuart, another listed company, as well as Sparrow.

Grayston has cut its crane fleet by a third in the past two years and made estimated pre-tax profits of £600,000 in the six months ended September 1985.

BET will offer one of its own shares for every five of its own shares.

Mr Paul is reported to have offered 60p a share.

BET is also offering a cash alternative worth 60p a share. It owns no Sparrow shares yet.

BET would also be taking on Sparrow borrowings of £18.8m at December 31 1984.

Mr Paul is reported to have offered 60p a share.

BET is also offering a cash alternative worth 60p a share.

UK COMPANY NEWS

Sears up despite 21% footwear fall

Sears, the UK's largest retailer in terms of outlets, yesterday reported a mixed bag of interim results from its diverse range of High Street operations.

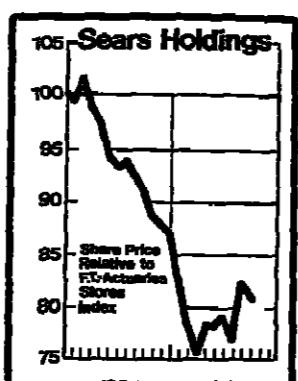

Footwear, which usually earns half the group profits, suffered a sharp downturn but gains elsewhere enabled the group to show a 10 per cent advance in taxable profits from £62m to £68.3m. Turnover for the six months to end-July 1985 rose from £945m to £1,088m.

Earnings per share were higher at 2.5p (2.6p) and the interim dividend is being raised by 0.1p to 0.9p.

"Unreasonable" summer weather in the UK and also the continued weakness in retail margins in the U.S., were principally behind a 21 per cent fall in sales of footwear trading profits, says Mr Geoffrey Maitland Smith, the chairman.

Footwear operations are made up of the British Shoe Corporation, Freeman, Hardy & Willis, True Form, Manfield, Saxone, Lilley & Skinner, Dolcis and Riva shoes.

The footwear downturn was comfortably offset by department stores, multiple fashion and other

which Sears acquired earlier in the year, is "proving a success. I am confident that it will make an increasing contribution to profits in the future," he says. Other Sears stores encompass Olympus Sportswear, Mappin & Webb, and Garrard & Co.

Motor vehicles sales and service operations returned lower profits of £4.5m, although the corresponding figure of £5m included film in respect of the vehicle delivery business which was sold in August 1984.

Licensed betting offices, taking in the William Hill chain, notched up a £2.6m gain to £8.1m and property development and investment activities returned a higher £1.1m against £7.4m. Engineering contributed an unchanged £1m.

Group pre-tax profits included associate contributions of £1.5m (£1.4m) and were struck after more than trebled interest costs of £3.6m (£1.1m).

On proceeds, the chairman says the start of trading in the second half has been patchy due to the continued unseasonable weather. "However, the early introduction of our autumn merchandise resulted in a welcome increase in trade."

Mr Geoffrey Maitland Smith, the chairman

See Lex

retailing outlets which more than doubled profits from £10.1m to £20.5m.

"Our department stores and multiple fashion activities achieved excellent results with Selfridges and Lewis's benefiting especially from our capital expenditure programme and improved merchandise policies," says the chairman.

Foster Brothers Clothing, the High Street menswear chain

was particularly behind a 21 per cent fall in sales of £2m.

Footwear operations are made up of the British Shoe Corporation, Freeman, Hardy & Willis, True Form, Manfield, Saxone, Lilley & Skinner, Dolcis and Riva shoes.

weather in the UK and also the continued weakness in retail margins in the U.S., were principally behind a 21 per cent fall in sales of £2m.

Footwear operations are made up of the British Shoe Corporation, Freeman, Hardy & Willis, True Form, Manfield, Saxone, Lilley & Skinner, Dolcis and Riva shoes.

The directors say that the best trading and financial opportunities are derived from the leasing of medium range central processing units and peripheral equipment, although the group's brokerage activities in new and second hand computer equipment are an essential part of our service."

Profits for the interim period were after interest payable of £421,000, against £131,000. There was a tax credit of £54,000 (£194,000 charge), and after minorities £68,000 (£26,000), attributable profits came through ahead from £827,000 to £151m.

Earnings per share are given

as 5.88p, compared with 5.69p. Group has maintained a broad geographical spread with more than two-thirds of business being generated outside the UK, enabling the group to capitalise on the differing market opportunities in Europe.

In the UK, the high level of activity experienced in the first quarter, stimulated by the progressive reduction of first year tax allowances, has continued into the second half of the year, directors state.

The success of the group's leasing business has added £17m to portfolio of equipment which now totals £70m.

The growth of the portfolio will add a small amount to profit in 1985 and, as previously indicated, will begin to make a significant contribution in 1986.

At June 30 1985, the potential future profit resulting from this source over the next five years is currently estimated by the directors to be £7m, an increase of £1.5m over the previous 31 last year.

The directors consider, in the light of current and anticipated levels of capital expenditure, the previous provision for deferred taxation can be reduced by £232,000, giving a net credit for the period of £54,000.

The group continues to generate a strong positive cash flow from its brokerage and

arranged and finance lease business.

The group's recent acquisition, CMA Data A/S, a company based in Denmark which specialises in the provision of data services and automated communications, has been successfully integrated into the group.

• comment

Comcap's involvement with the currently out-of-favour electronic sector has seen its share price sag from 265p at the time of its final results last March, to 180p, but the continuation of its expansionary growth revealed in yesterday's figures, which shares a 5p log up to 220p.

Whatever may be happening to IBM and the other computer manufacturers, Comcap's market is growing strongly: the demand for data processing is doubling every few years and lessors of computers and peripherals are the beneficiaries. This year at least £2m is in sight, putting the shares on a prospective p/e ratio of 11 after a 20 per cent charge. The rating looks a little miserly in view of the performance, probably reflecting nervousness over the sector generally and fears that IBM's own leasing operations will pull the mat from under Comcap's feet. The fears look overdone, at least in the short term.

See Lex

Net profits also emerged lower at 29.9m (£14.2m), reflecting not only the reduction in operating profit but also the resumption of tax credits in prior years.

Although the group saw the effect of the expansion of Vortex Blaster and Draft Automatic detergent, most of the turnover increase arose from established brands.

The directors say that on the investment side improvements have been made on many established brands, "which have been carried out despite cost escalation caused by the falling pound and major rises in the costs of some commodities such as oils and fats."

In addition to these product improvements during the year, Procter has funded the first year's investment in Vortex, opened test markets for two new brands, and increased the rate of investment in new capital equipment to improve product quality, costs and productivity.

See Lex

Turnover for the 12 months to June 30 expanded by 16.5 per cent from £365.2m to £425.7m but operating profits emerged 51m lower at £2m. And after high interest costs of £2m (£1.4m) the taxable result came out £1.6m down at £12.2m.

Net profits also emerged lower at 29.9m (£14.2m), reflecting not only the reduction in operating profit but also the resumption of tax credits in prior years.

BUSINESS LAW

Disputes: the other way

By A. H. HERMANN, Legal Correspondent

This is the concluding article in a two-week series on the resolution of business disputes.

"THE FIRST thing we do," said Dick the Butcher, "lets kill all the lawyers." This is obviously a counsel of despair with which one need not agree, not entirely anyhow. There is some hope that lawyers can be re-educated, at least some of them. The first point of the re-education programme should be that for most people justice matters more than law. And the second point is that when it comes to justice, money does matter. As Lord Devlin said: "The trouble at the root of our legal system is that we have allowed it to grow up in an atmosphere in which, where justice is concerned, money is hardly an object."

The cost of litigation in the UK is such that most people are frightened of the judicial system—and the cost of arbitration is sometimes even greater.

And it is even worse in the US. Judicial statistics reveal that the proportion of actions settled before they come to trial

In a minority of cases, the settlement is brought about by genuine agreement. In most cases the fear of the enormous costs of the trial obliges the financially weaker party to give up. This is a very unsatisfactory solution which has nothing to do with the pursuit of justice.

A reaction against the mounting cost of litigation and arbitration—sometimes greater than the award to the winning party—leads to a proliferation of non-judicial methods of dispute resolution. All sorts of UK complaints procedure fall into this category. Some are operated by trade or professional organisation—the Insurance Ombudsman Bureau and the Banking Ombudsman, for example. If you think your solicitor's bill is bigger than it should be, you can ask him—within a month—to obtain a Law Society remuneration certificate, and if you are still dissatisfied, you can go further and ask for taxation of the costs by the court, if these are related to litigation.

There is also a proliferation of independent, quasi-judicial dispute determinators, often operating in a two-instance system. Thus, trading standards officers can refer serious consumer complaints to the Office of Fair Trading; the Lay Observer supervises and reports on the way the Law Society deals with complaints. And solicitors there are the Local Administration Commissioners to be approached through local councillors—and the Parliamentary Ombudsman to be

structured to respond to the requirements of high finance and of big business. They can succeed where litigation and arbitration are bound to fail because neither the judge nor the arbitrator can rewrite the contract to meet new developments and unforeseen circumstances.

"Renegotiation" is the word when defaults of sovereign borrowers have to be papered over. "Consolidation" when the International Monetary Fund and the World Bank step in.

On a less august level, we have now the "mini-trial"—a misnomer, as it is no trial but a carefully prepared session designed to clarify the claims and possibilities of the parties and to arrive at a solution which would not harm an ongoing business relationship. It can be sought "off the record" and "without prejudice" to any future litigation or arbitration; or parties can agree that certain disclosures or partial agreements can be carried forward to the next stage. It may be that a party which rejects the chairman's recommendations will have to pay the costs of subsequent litigation unless it thereby obtains a substantially better result.

Though the scheme is of U.S. origin, the Zurich Chamber of Commerce has also introduced a "mini-trial" designed for international commercial disputes.

A panel consisting of two senior corporate officers of the disputant concerns and a neutral chairman of equivalent standing bears the issues and aims to achieve a settlement

Written submissions are limited to 25 typed pages and time limits of 30 days are imposed. Lawyers are not discouraged. If no agreed settlement is reached by the deadline, the panel submits a settlement recommendation, unanimous if possible, otherwise from the chairman.

The mini-trial can be often a faster procedure than suggested by the Zurich scheme—it can be concentrated into one or two days, during which executives, or the parties in dispute hear, often for the first time, what the real issues are and how they appear to the other side. There is time for a brief oral explanation by each party, a free-for-all question session and the chairman's estimate of the probable outcome, duration and costs of litigation. And after a lunch taken by the two parties and their advisers separately, an agreement—or so one must hope.

* Henry VI, Part 2.

Making the most of the charms of mint

I HAVE never seen the charm of herb gardens. Most herbs strike me as coarse and useless. Who really wants wood in a flower bed unless they have Anglo-Saxon pretensions?

Mints have a nasty habit of being short-lived or ineradicable so that herb beds end up as a mixture of gaps and small jungles.

People fall for their evocative names and then regret them. Lovage is the worst culprit. It secretes an acid oil which somebody once tried to market as a tea for lime in drinking water.

Lovelock's market did not survive the arrival of fluoride. It then transferred its name to a commercial drink, now forgotten.

My bible of the unusable properties of herbs is the Modern Herbal of Mrs Grieve. Published in 1931, it is unsurpassed in its range of useless information.

"The public house cordial named Lovage was formerly in vogue," she tells me, "but it was not a drink which may have possessed to Tansy."

Say no more. Tansy has no virtue; it is a coarse plant which used to make beastly cakes for prizes at village shows. Horses and goats refused to touch it.

There is one shining exception to these complaints and at this late time of year is still giving me great pleasure.

Even if you hate mint sauce and mint leaves in Pimms, mint is a charming garden plant. Admittedly, it can be invasive. When it has flowered it looks scruffy, it is also prone to rust. Beware of these little weaknesses and they make the most of its charms.

Cut your mint frequently to stop its flowers and encourage the young leaves. Contain the roots in a firm boundary, an old bucket with a hole in the bottom, or a sink beneath a garden wall.

You may well find rust on plants which shape try to sell you; it shows in the little orange dots on the lower stems and the backs of the leaves. The scientific treatment is to cut off the affected stems and prevent the fungus from spreading by spraying the soil with Thymolite.

Last rust-infected roots clean them and dip them first into a bucket of hot water and then, after 15 minutes, into cold water. Then replant them in a fresh site. Apparently the rust then dies out.

In the past 10 years mint collectors have brought many old varieties back on to the market. There is one villain in the family, the Horsemint.

which is recognisable from its long pointed leaves with soft white hairs.

Avoid this tasteless variety at all costs and watch out for the copious half-caste which it fathers on the spearmint. This form is the one we all like in mint sauce, but it is regrettably mint.

Australia in fresh attack on Europe's farm policy

By Our Commodities Editor

EUROPE'S COMMON Agricultural Policy may be keeping up to 1m people out of work in manufacturing industry, according to a study released in London yesterday by Australia's Bureau of Agricultural Economics.

The report — "Intersectoral Effects of the CAP" — is the latest broadside against European farm policy from the Australian Government-funded Bureau. Last month it published a major study aiming to demonstrate that the CAP cost European consumers and taxpayers £1.5bn equivalent to 7.5m European Currency Units (Ecus) a year.

Yesterday's report said that without the distorting effects of agricultural protection, which has depressed economic growth and kept import prices up, net manufacturing exports could have been Ecus 30bn greater in 1983. That would imply that manufacturing output might have been about 4 per cent higher,

EEC butter plan angers British manufacturers

BY ANDREW GOWERS

BRITISH BUTTER manufacturers yesterday sharply criticised the European Commission's emergency plans to reduce the EEC butter mountain by making further subsidised export sales or feeding it back to cattle.

The Community's surplus stocks of butter, in public and private hands, total more than 1m tonnes despite recent moves to cut milk production, and the Commission recently announced that it was urgently examining options for their disposal.

These include the possibility of another large subsidised sale to the Soviet Union, exports of old butter in the form of "ghee" to India and Pakistan, domestic sales of concentrated butter for cooking purposes and — most bizarre of all — the feeding of butter back to the animals which produced it. The English Butter Marketing Company, which represents manufacturers in England and Wales, said yesterday, following a meeting with members of the retail trade, that all these schemes would be more costly

than equivalents in the past, and would have substantial political or economic drawbacks.

For example, the proposed sale of 100,000 tonnes to the USSR would need to take place at a high rate of subsidy given the present competitive conditions on the world market.

The existing scheme to subsidise sales of concentrated butter for use in cooking cost £1.175 per additional tonne sold, and generated only 4,000 tonnes of extra sales. But it is reported that Brussels would like to sell 40,000 tonnes more under its new proposals.

Mr Mike Bessy, EBMC chairman and a senior Milk Marketing Board official, said the Commission should consider three alternative proposals:

• Further subsidising use of butter as an ingredient in the EEC food industry in order to replace the estimated 2m tonnes of vegetable and fish oil which the UK butter market will continue to decline," said the EBMC. This could add up to £80,000 tonnes to UK intervention stocks over the next three years.

present marginal cost of £1.949 per tonne for disposing of intervention stocks — would enable butter to make "very substantial inroads" into this market.

• Extending the "social butter" scheme currently implemented in parts of the Community to cover permanent.

Mr Bessy said that if butter were to be subsidised to a price equal to that of premium margarines, 31,500 tonnes of extra butter consumption could be generated. This would save pensioners some £53m, he said.

However, such a scheme, like the plan to replace vegetable and fish oil imports, would be vehemently opposed by powerful margarine manufacturers like Unilever.

• Introducing an all-the-year-round consumer butter subsidy. It is one belief that if nothing is done to decrease the price difference between butter and margarine, the UK butter market will continue to decline," said the EBMC. This could add up to £80,000 tonnes to UK intervention stocks over the next three years.

THE UK Government has finally bowed to a barrage of livestock farmers' appeals for extra help following the wettest British summer in years.

Yesterday's announcement by Mr Michael Jopling, the Agriculture Minister, to the Conservative Party conference that the Government would provide unspecified financial assistance to livestock farmers follows repeated requests for aid, particularly from Scotland.

It also marks a distinct softening in the Government's previous tough stance towards farmers. A number of demands for special assistance have been ignored or turned down in the

past.

At the beginning of the Blackpool Conference yesterday morning, the Scottish National Farmers' Union sent an urgent message to Mrs Margaret Thatcher, the Prime Minister, detailing what they described as the worst Scottish weather conditions for over a century.

Between July and September they had experienced between 200 and 350 per cent more rainfall and 75 per cent less sunshine than normal.

Milk production was more than 13 per cent down on 1982, livestock prices were falling, 80 per cent of the hay crop had been destroyed, and perhaps as

much as 40 per cent of the grain harvest would be uncultivated.

Farmers elsewhere in Britain fear that their profits will be severely hit following this year's poor-quality cereal harvest.

Livestock farmers in Northern Ireland have already been promised help with a transfer of feed grains from intervention stocks elsewhere in Britain.

Mr Jopling also announced that the Government would provide up to £2.5m in additional support for Food from Britain, the marketing organisation it established in 1983.

This follows decisions by farmers and food manufacturers to provide their own funding.

France both in the Irish Republic and in Northern Ireland are set to benefit from the deal, costing an estimated £100m on the overstretched EEC farm budget.

National officials are now waiting to see whether Italy will also join the queue for special relief.

France YESTERDAY joined the queue for emergency relief from the EEC for its farmers, calling for 200,000 tonnes of cheap fodder grain for its drought-hit southern regions.

The plea came just as an emergency package for Irish farmers, suffering from the effects of excess rain, was set to be approved by national officials in the Special Committee on Agriculture.

The French request now

seems likely to go before the European Commission at its weekly meeting today, and final approval of the Irish package was held over until next week.

France is understood to be seeking similar terms for its drought-hit farmers in the Midi, the Massif Central, and the south-west.

National officials are now

waiting to see whether Italy

will also join the queue for special relief.

Stefan Wagstyl on the current round of price talks

Nickel producers feel the pinch

THE WORLD'S nickel producers are this week expected to complete a tough round of price talks with their customers.

Their negotiating position has been worse than could have imagined a few months ago — indeed probably worse than at any time in the past two years.

They are trying to settle prices for the fourth quarter of 1985 in the wake of a sudden and sustained fall in the free market price which has cut the ground away from under their feet. The price has dropped from a high earlier this year of \$2.45 a pound to around \$2.00. This means that producers who secured about \$2.35 for their contract nickel in the third quarter may now get below \$2.15. Some consumers have already forced the nickel companies to accept \$2.10.

The fall to \$2.00 is of more than psychological importance for it is at this level that even the most efficient producers begin struggling to break even. This goes for the Canadian giants Inco and Falconbridge, which have drastically cut costs over the past three years. Inco, which returned to profit in the fourth quarter of last year after several years of heavy losses, says that its nickel costs about \$2.10 to produce.

The nickel companies are busy arguing that the free market price is now unacceptably low, particularly in view of the recent fall in the dollar. But even they are not setting their sights too high. Mr Paul Salzburger, Inco's director of market research, says: "Prices will go up. Though it may only be to \$2.20, that's a hell of a lot better than \$2.00."

But the fact is that prices have returned to near their average for 1982-1983 and 1984. In retrospect this year's spring surge looks like an anomaly in which prices rose on the back of fears of interruptions to supplies — primarily as a result of political unrest in the Pacific island of New Caledonia, which produces some 10 per cent of the Western world's nickel.

In the wake of the price fall the nickel companies' capacity weighs heavily on their balance sheets. They are able to produce perhaps 30 per cent more

nickel than the world consumes, largely as a result of the expansion of the industry in the 1960s and 1970s when new producers in Australia, the Dominican Republic, Africa and the Philippines increased production to cut back the former dominance of the Canadian companies.

In the recessionary 1980s heavy losses have brought cuts

nearer than the world consumes, for example, or electropolishing companies — to take up the slack. One New York metal trading company said that even the long-awaited recovery in civil aircraft manufacture — which would create a demand for nickel in superalloys for jet engines — had yet to make itself felt.

A review of nickel supply and demand leads almost every market commentator to bleak conclusions about the outlook for nickel prices. Mr Jim Lennon, senior consultant with CRU, says of prospects for the rest of the 1980s: "We do not anticipate any major improvements." And a senior executive at a U.S. manufacturer of superalloys says: "Nickel didn't join in the recovery. It's just a matter of time before the next recession is upon us. That will mean more over-supplying for the nickel industry."

The nickel companies try to put a brave face on things. They argue that the immediate outlook is not as bad as it seems, since one feature of 1985 has been a run-down in consumers' nickel stocks. These may now be built up.

Looking at the longer term outlook the producers point out that even if capacity cuts in the early 1980s have been reversed they have at least gone some way towards cutting the surplus. And lower prices have put off the development of new mines. At Inco, Mr Salzburger says: "I guess the basic point I am trying to make is that there's no reason to think that things are all bad. We don't see any new competition in the pipeline."

Demand, too, may be stronger in the late 1980s, say the producers. The next economic upswing may bring with it the increase in heavy industrial investment which has been weak in many countries this time around. That would mean great demand for nickel, for example, in stainless steel for process plant engineering.

But the nickel companies remain very cautious. Mr Salzburger says: "Since the mid-1970s demand has been flat. I would see growth of 1 to 2 per cent a year ahead. That is better than nothing but it's nothing to shout about."

In the nickel market, then,

consumers seem to have the whip hand.

Demand for nickel in the current economic cycle has not regained its 1979 peak of 580,000 tonnes of refined metal consumed in the Western world, according to trader Shearson Lehman Brothers. From a low of 476,000 tonnes in 1981 it has climbed to \$430,000 in 1984. Hopes that this momentum

continues to build will depend on the outcome of the price talks.

Dollar mixed in nervous trading

The dollar showed mixed changes in currency markets yesterday as dollar bulls and bears continued to play a cat-and-mouse game. Demand for the dollar existed partly because of the proximity of U.S. bond auctions, but speculators were inhibited to some extent because although central banks appear to be content to allow the dollar a period of consolidation, there was still some activity by the Japanese and West German central banks and there was no way of knowing if and when further concerted downward drift on the dollar would be mounted.

Consequently there was a natural desire to avoid carrying long dollar positions and with the market lacking a real volume, it was left to push the dollar higher. The dollar finished at DM 2.6485 from DM 2.6300 and SwFr 2.1695 compared with SwFr 2.1690. Against the yen it closed at Yen 131.58 from Yen 131.40 and FTT 8.07 from FTT 8.06. On balance of the figures the dollar's exchange rate index was 131.0 from 130.8.

STERLING — Trading range against the dollar in 1985 is 14,400 to 14,825. September average 14,857. Exchange rate

£ IN NEW YORK

	Oct. 8	Prev. close
2 Spot	11.4125-1.4140	11.4118-1.4140
5 months	11.45-11.46	11.44-11.45
1 month	11.45-11.47	11.44-11.45

index 86.1 compared with 86.2 on Monday. The six-month average was 76.3.

Sterling showed little overall change yesterday in very lacklustre trading. News of a 1 per cent rise in UK M3 money supply provided a small fillip, and sterling's recent gains led to a very narrow trading range.

Sterling showed some resistance at the day's low against the dollar of \$1.400 and recovered to close at \$1.4125-1.4135, a fall of just 5 points from Monday's close. Yesterday's money supply figures effectively put paid to any hint of a imminent or imminent cut in UK clearing bank base rates with M3 now further beyond official target ranges. Against this background the market found very little to

act on and most trading lacked both direction and conviction. The pound closed at DM 2.6300, DM 3.7250 against the D-mark and SwFr 3.0650, unchanged from Monday.

Against the yen it rose to Yen 130.55 from Yen 130.50, but eased against the French franc to Fr 11.4225 from Fr 11.422.

D-MARK — Trading range against the dollar in 1985 is 2.4515 to 2.6490. September average 2.5370. Exchange rate index 127.3 against 126.8 six months ago.

The dollar was fixed at DM 2.6485 at yesterday's fixing in Frankfurt up from DM 2.6300 on Monday and the Bundesbank sold \$3.2m at the fixing.

Trading remained on the quiet side with little evidence of central bank intervention, and the dollar's position of central banks and the possibility of further concerted intervention tended to reduce trading volume, with many people content to remain on the sidelines as much as possible. Others suggested that central bank action would allow the dollar a brief period of consolidation before embarking on any renewed attempts to push it lower. The dollar closed at DM 2.6490 from DM 2.6450.

The short gilt also fell on the figures, but did not show as much recovery, finishing just above the low at 98-15 (quoted in 48ths) for December delivery, compared with 98-12 on Friday.

Through sterling's decline for December closed at the day's low of 88.05, against 88.15 previously, and after opening at the peak of 88.18. Money market cash rates showed almost no reaction to the M3 figure, but the announcements coupled with the most nervous performance of the short gilts, reflected in the shortening of the foreign exchange, appeared to put back any hopes of lower bank base rates for some time.

Dollar denominated contracts traded very quietly. December Eurodollars moved in a narrow range of \$1.63 to \$1.68 and closed at \$1.65, up from \$1.64, underpinned by a slight easing of the Federal funds rate in New York. Rumours about the possible resignation of Mr Paul Volcker as chairman of the Federal Reserve Board may have already been discounted by the market.

Sept 26 Oct 10 Oct 11 Oct 21
Oct 4 Oct 24 Oct 24 Nov 4
** "New-times" dealings may take place from 9.30 am two business days earlier.

London stock markets put on another lacklustre performance yesterday as investors continued to shun the market's lack of enthusiasm. Leading equities drifted lower again and Government stocks also showed an easier bias.

The money supply statistics for mid-September, indicating growth of 1.1 per cent in and proved a disappointment and prompted a further slight deterioration in the afternoon trade.

However, blue chip industrials did not move down far sentiment being underpinned by a certain extent by rumours of a major bid in the offing from one of the two current prime candidates. Distillers and Allied Lyons traded on a relatively quiet note. Imperial Group officially announced yesterday that it would not be joining any potential consortium bid for Allied Lyons.

Reaching the early resistance in the last hour, the Financial Times Ordinary share index reduced a loss of 5.1 at the first calculation to one of only 1.1 at 2 pm before drifting off again after the money supply figures to close 5.2 off on a two-day fall of 10.72 making a two-day fall of 9.3.

Meanwhile, British Electric Traction's offer for G. W. Sparrow encouraged a slightly broader interest in other potential bid stocks. Most of the day's more noteworthy movements however resulted from company trading statements.

The disappointing money supply figures, although up slightly, failed to make much of an impression on Government securities. Already a fraction easier, medium- and long-dated stocks were marked down a further 1 to 3 to finish the day with falls of 1%, while final losses in the shorts ranged to 1% and occasionally more. Quotations held steady at the lower levels in the late afternoon.

Banks quiet

The major clearers failed to gain inspiration from the U.S. plan to alleviate the world debt crisis. Irish Banks, firm on Monday on hopes of fresh developments concerning the debts of Insurance Corporation of Ireland, turned easier in the absence of further interest. Allied Irish softened a couple of points to 160p and Bank of Ireland lost to 340p.

Insurers displayed a mixed falls, following quiet trade. Refugees, a firm counter on Monday reflecting Bank of Nova Scotia's recently acquired stake, eased 3 to 377p.

Residential property developers Fairbrill made a disappointing market debut; the shares, offered for sale at 120p, opened at a 14p discount and drifted on lack of interest to settle at 104p.

WALL STREET

Uneasy wait for federal debt ceiling

THE DELAY in Senate approval for the increased federal debt ceiling continued to unsettle the US securities markets yesterday, writes Terry Byland in New York.

Bond and stock prices moved narrowly around their overnight levels in sluggish trading.

The stock market was featured by weakness in defence stocks and by weak spots among computer companies.

Takeover issues returned to centre stage, but the market leaders shaded lower as the first corporate results for the third quarter began to reach the marketplace.

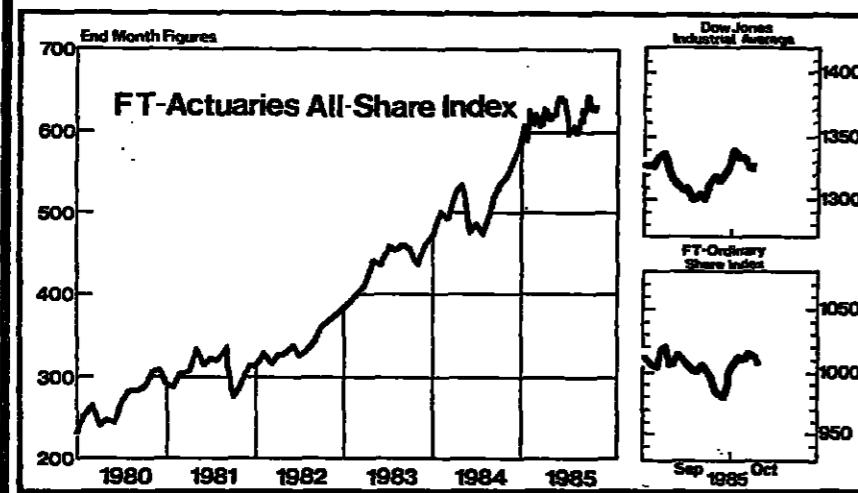

At the close the Dow Jones industrial average was 1.12 down at 1,325.49.

In an expected response to the delay to the federal funding programmes, the Federal Reserve acted to drain liquidity from the market by making matched sales and repurchases when federal funds stood at 7½ per cent.

The Treasury, announcing its cash balances were nearing zero, said that, as soon as the new debt ceiling was approved, it would auction \$5bn in short-term bills. The bond market expects a further \$50bn or so in Treasury funding before Christmas.

Bonds, a shade easier at first, steadied at mid-session but continued to lack retail support and underlying confidence.

Among computer stocks, IBM eased 3% to \$124 and Honeywell \$1 to \$59.50. Digital Equipment fell 3% to \$103.90 on bearish reports from a meeting between the board and brokerage analysts.

International Paper, the world industry leader, eased 3% to \$45.75 after disclosing a sharp fall in quarterly profits. Other paper industry stocks, also due to report this week, showed a scattering of small losses in thin trading.

Time Inc fell 2% to \$54 on a profits warning from the directors which unsettled other media stocks, including CBS, down 3% to \$117.

In the health-care sector, sorely battered by last week's selling, Humana steadied at \$27.40 in brisk turnover after announcing higher earnings for its fourth quarter. Hospital Corporation of America, which has forecast a 10 per cent rise for its third quarter, to be followed by a flat fourth quarter, added 3% to \$28.60, helped by the trading of some large blocks of stock.

Heavy trading in American Medical International left the stock 3% higher at \$18.50.

Stock in Rubbermaid eased 3% to \$25.50 despite better results, and IC Industries, at \$30.40, shed 3%, also after trading news.

The same special features enlivened the market. Manville reacted to the board forecast of a loss for the third quarter and full year by easing 3% to \$5.75. BankAmerica edged up 3% to \$13.75 after selling two financing units to Chrysler for \$45.5m.

Defence stocks took a beating after Drexel Burnham Lambert removed the sector from its "buy" list. General Dynamics fell 2% to \$66.40, although trading was light. Also hit were McDonnell Douglas, down 3% to \$86.40, and Northrop, down 3% to \$42.20.

Boeing dipped \$1 to \$43.50, but Lockheed

rallied from its lowest point to show a fall of 3% at \$45.50, and Litton was only 3% off at \$36.70.

In bid stocks, Beatrice Foods, in another bout of heavy trading, jumped 3% to \$40.75 although the board refused to comment on market suggestions that it was preparing a management buyout at "above \$45 share."

With the bid struggle approaching its conclusion, SCM edged up 3% to \$73 in busy trading as Hanson Trust made a tender offer of \$75 a share cash for the two thirds of the equity not already held by Hanson.

Lowenstein gained 3% to \$62.25 to match the \$63 offered by Spring Industries. Bid excitement in the cosmetics industry turned towards Avon Products, pushing the stock up 3% to \$24.75.

Stock in Frontier Holdings resumed trading at \$21, up 3% after the increased offer from Texas Air.

Pharmaceuticals had another difficult session. Monsanto, unsettled recently by legal attacks on a drug produced by its newly acquired subsidiary, G.D. Searle, rallied \$1 to \$42.40. But Pfizer fell 3% to \$44.60 and Upjohn \$2.40 to \$109. Warner-Lambert recouped 3% of Monday's fall to stand at \$35.75.

Bond prices edged higher as it became clear that the Treasury funding plan was still delayed by the Senate wrangle over the new debt ceiling. Short-term rates were firm, with federal funds remaining at 7½ per cent despite the Fed's intervention.

TOKYO

Blue chips lack power to lead way

BLUE CHIPS firmed and large-capital issues found buyers in Tokyo yesterday, but many investors remained cautious, writes Shigeo Nishizaki of *Japan Press*.

The Nikkei-Dow market average rose 43.12 - the fourth consecutive gain - to 12,835.21. Trading expanded from 253m shares on Monday to 383m. Gains outnumbered losses 423 to 370, with 149 issues unchanged.

An investment trust bought 500,000 shares each of Matsushita Electric Industrial and Sumitomo Electric Industries, encouraging investors to buy blue-chip electricals and precision instruments.

Matsushita Electric Industrial advanced Y10 to Y1,140, Sumitomo Electric Industries Y26 to Y775 and Sony Y70 to Y3,560. Nippon Kokagu closed Y8 higher at Y769 and Olympus Optical Y10 at Y10.00.

However, many blue chips seem to lack the power to lead the market because of the potential impact of U.S.-Japanese trade friction. They are also prone to business deterioration, due to the yen's appreciation.

Nippon Steel topped the active list with 25.1m shares, gaining Y1 to Y196. Mitsubishi Heavy Industries finished Y8 up at Y458. Tokyo Gas added Y7 to Y235 and Tokyo Electric Power rose Y40 to Y2,630.

Major securities houses sought large-capital stocks. A dealer said technical market indicators were showing signs that the price adjustment of large-capital stocks had been completed. But buying was weaker than it was from late September to early October.

Toray advanced Y10 to Y578 with the day's second busiest trading of 17m shares. Nippon Express, a stock with off-the-book assets, jumped Y17 to Y867.

Government measures to expand domestic demand, due on October 15, pushed up housing-related issues. Sekisui Chemical was Y27 up at Y633 and Sekisui House Y16 up at Y564.

Transactions of Minebea shares grew on a rumour that Glen International Financial Services of Britain would try to take over the Japanese ball-bearing producer in co-operation with Trafalgar Holdings of the U.S. The Minebea price rose Y41 to Y805.

Biotechnologies lost ground after gaining on Monday due to speculative buying with Kaken Pharmaceutical losing Y40 to Y3,050 and Dainippon Pharmaceutical Y30 to Y130.

Speculative buying by a leading securities house spurred trading in the barometer 8.8 per cent government bonds, maturing in December 1994, and the yield dropped to 5.555 per cent from 5.595 per cent on Monday.

Bond prices opened firm, reflecting Bank of Japan Governor Satoshi Sumita's remark that the yen rate should be guided to 210 or lower to the dollar.

But as the yen eased to the 215 level in Tokyo yesterday, a wait-and-see mood prevailed among dealers, dampening trade.

HONG KONG

PROFIT-TAKING developed in Hong Kong after two days of solid gains, and the Hang Seng index retreated 1.23 to 1,226.53.

International City Holdings rose 9 cents to 97 cents after a one-day suspension following the bid for the outstanding shares in ICH by Hutchison Whampoa and Hongkong Electric. Hutchison turned 10 cents cheaper at HK\$8.90, and HK Electric was steady at HK\$8.05. Cheung Kong, presently holding a 30.7 per cent stake in ICH, lost 10 cents to HK\$18.80.

Moving against the weaker trend was Jardine Matheson, 10 cents up at HK\$12.30 on further speculation that the company will be the next corporate takeover target.

EUROPE

Partial retreat from peaks

A PARTIAL retreat from record heights was staged on the European bourses yesterday as investors were caught in the cross-fire of technical profit-taking.

Milan was the exception. An early fall, precipitated by the reports that Fiat and Ford had decided to scrap joint-venture talks, was overturned, and the broader market found more encouragement from the recent batch of hearty first-half results. Mutual fund buying was also in evidence.

Fiat naturally lost ground, dipping a further 1.1% from Friday's record level to finish at 14,758. Banks were generally firm, with Banca Commerciale picking up L380 to L26,800 while insurer Toro traded L65 higher at L3,880.

Saipem, the oil services group, continued to break fresh ground with a L39 advance to L6,880, a high for the year, while Italceramica scored a L1,020 rise to L50,000. Ciga was also actively traded, adding L180 to L12,175.

Among the recently favoured internationals, Olivetti added L90 to L7,600 and Montedison shed L18 to L2,331.

At the close, the Banca Commerciale index peaked at 413.33, up 2.20, but sentiment turned somewhat easier in after-hours trading.

Frankfurt staged a mixed performance bolstered by mild institutional buying but peppered with sporadic profit-taking.

The Commerzbank index shed 2.0 points of Monday's peak level to 1,602.9. AEG featured with a DM 14.50 jump to a new high for the year of DM 171.50 amid reports, strenuously denied by both parties, that Robert Bosch, the automotive electricals group, was about to stage a takeover.

Retailers encountered a broad sell-off, with Karstadt taking the brunt of the pressure with a DM 13 fall to DM 269.

Banks made progress, with Deutsche Bank DM 2.50 higher at DM 672.50, just below its high for the year set on Friday.

Rosenthal, the ceramics group which has been hitting new highs in recent weeks, was mauled by the profit-takers again with another DM 5 decline to DM 31.3.

The bond market witnessed massive

Bundesbank intervention in an attempt to prevent a total collapse of prices which slumped by up to one full point in places. The central bank bought DM 231.9m of paper after buying DM 46.4m on Monday.

Brussels also took a step back from record highs, with the Belgian Stock Exchange index 3.08 down at 2,522.77. Pre-election caution was cited for the decline.

Market leader Petrofina nevertheless managed a BFr 30 advance to BFr 6,280, and Gevaert rose BFr 25 to BFr 4,375. Groupes Bruxelles Lambert shed BFr 20 of Monday's advance to finish at BFr 2,210, and utility Intercom dipped BFr 10 to BFr 2,445. Retailers Delhaize sprinted BFr 90 ahead to BFr 8,180.

Amsterdam internationals were mixed although banks and insurers initiated a recovery from recent setbacks.</
